Clinical Pharmacy and Pharmacotherapeutics

Dr. Ravishankar. K. and Kiranmayi. G.VN

The First Edition of Clinical Pharmacy and Pharmacotherapeutics is a new book which covers many general and important topics in and colour style has increased the clarity of presentation and total information content. The book describes wide range of contents and the authors have taken into consideration to enlighten and cover all the important topics useful for all students in the health sciences. All the topics are described in detail with salient features covering all modern clinical aspects. The key points of this book includes prevalence, Pathophysiology, Etiology, Clinical features, Diagnosis and Management of different disorders. This book interspersed with many tables, figures, images. This book will be an asset to all students since wide range of topics is covered. Information is organized according to the sequence used in many clinical pharmacy courses and in integrated curricula: General topics, Drugs used in different life stages, GIT drugs, Drugs used for hepatic diseases, renal drugs, cardiovascular drugs, drugs used to treat Respiratory Disorders, Neurological and Psychological Disorders, Infections, Endocrine Disorders, Obstetric and Gynecological Disorders, Malignant Disorders, Rheumatic Disorders, Eye Disorders, Skin Disorders, Miscellaneous, Case

Significance of this book includes

- Different Case Studies are discussed; explicit answers and discussions are provided in the text of IV section.
- Expanded coverage of general concepts relating to many topics in section 1.
- Many solved problems related to clinical Pharmacotherapeutics.

We believe that the book will satisfy this need of many students even more successfully. Most of the topics are covered and the reader no need to search for an alternative and finally we have a confidence to say that the best we are providing useful to the Pharma society.

Essential Concepts in Toxicology: Compendium for Pharmacy, Medical, Forensic and Veterinary Toxicology

P K Gupta

Textbook of Toxicology is the first complete text material for offering courses specially for pharmacy, medical, forensic, veterinary and related area in toxicology bringing together all aspects of toxicology required to thoroughly prepare BSc, MSc, MBBS, BVSc, Forensic specialists and Veterinary students and will also serve as reference to research workers in the field of toxicology.

It provides most cutting-edge text on a wide range of toxins and poisoning in human beings, farm and pet animals, as well as avian, aquatic, and exotic species. The book provides an easy to follow format that is designed to help students easily understand the information presented.

Key Features
- Concise description of chronological description of historical events
- Description of various toxicokinetics and PBPK models
- In-depth coverage of target organs, including development and reproductive toxicity
- Toxicity of metals, plant and animal toxins, and other xenobiotics
- In vivo test systems and safety evaluation of pharmaceuticals
- In depth coverage of testing protocols of medical devices and bioengineered products
- Toxicity of commonly used and abused drugs
- Useful information on toxicity of bacterial and venomous organisms
- Pesticides / agrochemicals and their poisoning
- Detailed coverage of preventive and therapeutic interventions
- New concepts including Principles of Good Laboratory Practices and Standard Operating Procedures

Modern Toxicology: An Authoritative and Comprehensive Resource for Toxicology, 3 Vol. set
P. K. Gupta
Modern Toxicology, 3 volume set, is the first complete reference written specifically for students having interest in toxicology bringing together all aspects of modern toxicology. It provides an advanced text covering the basic and clinical principals of organ and reproduction toxicity, adverse effects of xenobiotics, and immuno-toxicology and clinical aspects of a wide range of poisons and poisonings in animals and humans beings. Thus these volumes are intended to give a better understanding for use in formal courses in the graduate programs in toxicology or self-study by those individuals who wish to be accredited by various organizations concerned with toxicology who are required to have a multi-disciplinary knowledge in areas like environmental health, clinical and forensic toxicology (detection of intentional or unintentional toxic substances) or in industry (assessment of hazards of new compounds), government agencies, in private commercial laboratories; in material science toxicology (biomedical and engineering disciplines), as educators (courses in pharmacy, medicine, dentistry, agricultural, and veterinary practice); and finally for collection, storing, and retrieving toxicity information. In brief this set represents the collective wisdom of several internationally known toxicologists, and offers a unique text/reference source for those involved in various specialized sections of toxicology. Contributing authors for chapters of the 3 volume set are the most qualified and well-experienced authorities in their respective areas of toxicology.

Salient Features:
- Chapters are fully illustrated and extensively referenced
- Language is simple to follow and format is designed to easily understand
- Represents the collective expertise of several internationally known toxicologists
- Offers a unique text/reference source for those involved in various specialized sections of toxicology
- Useful to those who involved in biomedical areas and Agriculture, Food Technology, Pharmacy, Veterinary Medicine and related disciplines
- Also Biologists, Pathologists, Ecologists and Environmentalists will find this volume as useful reference book

Screening Methods in Pharmacology, 2 Vol. Set
Robert A. Turner

Guiding principles determining the presentation of the methods are described as follows:
- A complete and carefully described procedure is given, which includes particularly modifications of the original method, so that unnecessary manipulations are eliminated while the accuracy is sustained.
- The application of the method is described for both well-known drugs and new substances; an active, new substance is detected through the use of the method; a discussion is provided of other methods of screening for the activity and of the reasons for preferring the method given.
- The reliability of the method and its limitations are stated.
