CONTENTS

Preface to Third Edition ..... (v)
Preface to Second Edition ..... (vii)

CHAPTER 1

Network Variables and Elements

1.1 Introduction 1
1.2 Network Model 1
1.3 Network Variables 2
1.4 Network Elements 6
1.4.1 Active elements 6
1.4.2 Passive elements 9
1.5 The Resistor 10
1.6 The Inductor 13
1.6.1 Faraday's law of electromagnetic induction 13
1.6.2 Self inductance 14
1.6.3 Mutual inductance 19
1.6.4 Dot convention 20
1.6.5 Energy consideration in the magnetically coupled coils 22
1.7 The Capacitor 26
Problems 32

CHAPTER 2

Kirchhoff's Laws and Resistive Networks

2.1 Introduction 37
2.2 Kirchhoff's Laws 38
2.2.1 Kirchhoff 's current law 38
2.2.2 Kirchhoff 's voltage law 39

2.3 Resistive Networks 40
2.3.1 Resistors in series 41
2.3.2 Resistors in parallel 44
2.3.3 The voltage divider 46
2.3.4 The current divider 47
2.3.5 Ladder network 49
2.3.6 Source transformations 51
2.3.7 Voltage source with no series resistance 52
2.3.8 Current source with no parallel resistor 53
2.3.9 Voltage sources with parallel resistors or current sources 54
2.3.10 Current sources in series with resistors or voltage sources 55
2.3.11 Star – delta or Y – Δ transformation 60
2.4 Node Voltage Method 66
2.5 Mesh Current Method 75
2.5.1 Dummy mesh current method 79
2.6 Magnetic Circuits 84
2.6.1 Magnetic fields 84
2.6.2 Some definitions 85
2.7 Properties of Magnetic Materials 86
2.7.1 B-H curves 86
2.7.2 Classes of magnetic materials 87
2.8 Simple Magnetic Circuits 87
2.8.1 Leakage flux and leakage coefficient 88
2.8.2 Composite magnetic circuits 89
Problems 92

CHAPTER 3

Single Phase Circuits

3.1 Introduction 101
3.2 Characteristics of Periodic Functions 101
3.3 Average Value, R.M.S Value, form Factor 103
3.3.1 Average value 104
3.3.2 Effective value or RMS value 104
3.3.3 Form factor 107

3.4 Representation of a Sine Function 108
3.4.1 Trignometric representation 108
3.4.2 Phasor representation 109
3.4.3 Complex algebra representation 110
3.5 Steady State Response of R, L and C Elements to Sinusoidal Excitations 113
3.5.1 Response of pure resistance 113
3.5.2 Response of pure inductance 116
3.5.3 Response of a pure capacitor 119
3.5.4 Series R – L circuit 123
3.5.5 Series RC circuit 128
3.5.6 Series RLC circuit 130
3.5.7 Parallel RL circuit 132
3.5.8 Parallel R C circuit 133
3.6 Series Resonance 141
3.6.1 Characteristics of a series resonant circuit 141
3.6.2 Q – factor 145
3.6.3 Selectivity and bandwidth 147
3.6.4 Voltage across the capacitor 149
3.6.5 Voltage across the inductor 150
3.6.6 Resonance by varying capacitance 151
3.7 Parallel Resonance 153
3.7.1 Maximum impedance by adjusting frequency 155
3.7.2 Selectivity and bandwidth 157
3.8 Locus Diagrams 159
3.8.1 Impedance locus of series connected elements 160
3.8.2 Admittance locus of series connected elements 160
3.8.3 Admittance locus of parallel connected elements 162
3.8.4 Impedance locii of parallel connected elements 163
3.8.5 Current locus of a parallel circuit with one variable branch . 163
3.8.6 Inversion of circle 165
3.9 Magnetically Coupled Circuits 168
3.9.1 Sinusoidal steady state analysis of magnetically coupled circuits 169
3.9.2 The linear transformer 172
3.9.3 The ideal transformer 176
Problems 181

CHAPTER 4

Three Phase Circuits

4.1 Introduction 189

4.2 Advantages of Three Phase Over Single Phase 189

4.3 Generation of Three Phase Voltages 190

4.4 Interconnection of Three Phase Windings 192
- 4.4.1 The star connection 192
- 4.4.2 The delta connection 194

4.5 Analysis of 3 Phase Networks 196
- 4.5.1 Balanced star connected load supplied from balanced 3 phase 4 wire supply 197
- 4.5.2 Balanced star connected load supplied from a balanced 3 phase 3 wire supply 198
- 4.5.3 Power in a star connected system 202
- 4.5.4 Balanced Δ – connected load connected to a 3 – phase balanced supply 203
- 4.5.5 Power in a Δ – connected balanced system 205

4.6 Unbalanced Three Phase Network 208
- 4.6.1 Unbalanced star connected load supplied from a 3 – phase balanced 4 – wire supply 208
- 4.6.2 Unbalanced Δ – connected load 209
- 4.6.3 Unbalanced star connected load supplied from a 3 phase balanced 3 wire supply 211

4.7 Measurement of Three Phase Power 216
- 4.7.1 Two wattmeter method 216
- 4.7.2 Wattmeter readings and power factor in a balanced load 218

Problems 226

CHAPTER 5

Network Topology

5.1 Introduction 229

5.2 The Concept of a Network Graph 229

5.3 Chords or Links 235
5.3.1 Incidence matrix (A) 235
5.3.2 Circuit matrix or tie set matrix B 238
5.3.3 Cutset matrix Q 241
5.4 Formulation of Network Equations 243
5.4.1 A typical branch of a network 244
5.4.2 Node voltage equations 245
5.4.3 Loop current equations 249
5.4.4 Cutset equations 255
Problems 262

CHAPTER 6

Network Theorems

6.1 Introduction 265
6.2 General Network Equations 265
6.3 Superposition Theorem 268
6.4 Thevenin's Theorem 274
6.5 Norton's Theorem 276
6.6 Millman's Theorem 286
6.7 Reciprocity Theorem 289
6.8 Compensation Theorem 291
6.9 Tellegen's Theorem 296
6.10 Maximum Power Transfer Theorem 301
6.10.1 When source has internal resistance and the load is purely resistive 301
6.10.2 When source has an impedance and the load has variable impedance 302
6.10.3 When source has impedance and the load is purely resistive 303
Problems 309

CHAPTER 7

Differential Equations and Initial Conditions in RLC Networks

7.1 Introduction 316
7.2 Formulation of Network Equations 316
7.3 Duality 320
7.4 Initial Conditions in Networks 326
7.4.1 Behaviour of R, L and C at t = O 327
7.4.2 Behaviour of R, L and C at t = ∞ 329
7.4.3 Special cases 339
Problems 348

CHAPTER 8

Time Response of R L C Networks

8.0 Response of R L C Networks 356
8.1 Types of Energy Sources 356
8.2 Response of RL Networks 359
8.2.1 Internal energy excitation 359
8.2.2 Unit impulse excitation 361
8.2.3 Unit step excitation 362
8.2.4 Sinusoidal excitation 366
8.3 Response of RC Networks 368
8.3.1 Internal energy excitation 369
8.3.2 Impulse excitation 370
8.3.3 Unit step excitation 371
8.3.4 Sinusoidal excitation 373
8.4 Response of RLC Networks 381
8.4.1 Internal energy excitation 381
8.4.2 Impulse excitation 390
8.4.3 Unit step excitation 391
8.4.4 Sinusoidal excitation 394
Problems 399

CHAPTER 9

Laplace Transform Method of Analysis of Networks

9.1 Introduction 411

9.2 The Laplace Transformation 412

9.3 Laplace Transform of Some Important Time Functions 413

9.4 Some Theorems of Laplace Transformation 415

9.5 Waveform Synthesis 434

9.6 Gate Function 438

9.7 Periodic Function 441

9.8 Application to Solution of Differential Equations 444

9.9 Heaviside's Partial Fraction Expansion Technique 445

9.10 Application to Networks 449

9.11 Transform Networks 452

9.11.1 Resistance 452

9.11.2 Inductance 452

9.11.3 Capacitance 454

9.11.4 Solution of transform networks 455

9.12 Transfer Function 461

9.12.1 Poles and zeroes of transfer function 464

9.12.2 Significance of poles and zeros 466

9.13 Network Functions 469

9.13.1 Restrictions on poles and zeros of driving point functions 470

9.13.2 Restrictions on locations of poles and zeros of transfer functions 473

Problems 478

CHAPTER 10

Two Port Networks

10.1 Introduction 487

10.2 Two Port Networks 488

10.3 Open Circuit Impedance Parameters 489

10.4 Short Circuit Admittance Parameters 490
10.5 Transmission Parameters 495
10.6 Hybrid Parameters or h – Parameters 496
10.7 Relationships Between Different Sets of Parameters 499
10.7.1 Relation between y and z – parameters 499
10.7.2 Transmission parameters to z – parameters 500
10.7.3 h – parameters to z – parameters 500
10.7.4 Inverse hybrid parameters to z – parameters 501
10.8 Reciprocity and Symmetry 502
10.9 Interconnection of Two Port Networks 510
10.9.1 Cascade connection of networks 510
10.9.2 Series connection networks 514
10.9.3 Parallel connection of networks 516
10.9.4 Series parallel connections 519
10.9.5 Parallel – series connection 521
Problems 530

CHAPTER 11

Network Filters and Attenuators

11.1 Introduction 538
11.2 Symmetrical Networks 538
11.2.1 Image impedances of networks 539
11.2.2 Characteristic impedance of symmetrical networks 541
11.3 Measure of Attenuation : Neper and Decibel 543
11.4 Propagation Constant 545
11.5 Propagation Constant of Symmetrical Networks 546
11.6 Filter Characteristics 548
11.7 Nature of Characteristic Impedance in Pass and Stop Bands 551
11.8 Constant K – Filters 552
11.8.1 Constant – K low pass filter 552
11.8.2 Phase shift of a constant – K LP filter 554
11.8.3 Attenuation of a constant–K LP filter 554
11.8.4 Characteristic impedance of a constant – K LP filter 555
11.8.5 Constant – K high pass filter 555

11.9 m–Derived Filters 557
11.9.1 m–Derived T–filter 558
11.9.2 m–Derived π–filter 559
11.9.3 m–Derived low pass filter 560
11.9.4 m–Derived high pass filter 564
11.9.5 Terminating half or L – section 567
11.10 Bandpass Filters 571
11.10.1 Bandpass constant K – filter 571
11.10.2 Bandpass m–derived filter 574
11.11 Bandstop or Band Elimination Filter 577
11.11.1 Constant K bandstop filter 577
11.11.2 m–Derived bandstop filter 579
11.12 Attenuators 592
11.12.1 Symmetrical attenuators 592
11.12.2 Symmetrical T – attenuator 592
11.12.3 Symmetrical π – attenuator 593
11.12.4 Symmetrical bridged T – attenuator 594
11.12.5 Symmetrical lattice attenuator 597
Problems 600

CHAPTER 12

Fourier Series and Fourier Transforms

12.1 Introduction 602
12.2 Fourier Series 602
12.3 Convergence of Fourier Series 607
12.4 Symmetry Conditions in Fourier Series 608
12.4.1 Even function symmetry 609
12.4.2 Odd function symmetry 612
12.4.3 Halfwave or rotation symmetry 613
12.4.4 Quarterwave symmetry 616
12.4.5 Concealed symmetry 618
12.5 Complex Fourier Series 620
12.5.1 Some comments about complex fourier series 623

12.6 Fourier Transforms 629
12.6.1 Existence of the fourier transform 631
12.7 Fourier Transform Properties 639
12.8 Application to Networks 654
12.8.1 Periodic input functions 654
12.8.2 Pulse input functions 655
Problems 656

Answers to Problems 663
Multiple Choice Questions (MCQs) for Competitive Examinations 687
Answers to MCQs for Competitive Examinations 805
MCQs from Gate Examination, Yearwise from 2004 to 2014 811
