

Contents

1	Introduction	1
1.1	Why Automatic Control ?	1
1.2	Open Loop and Closed Loop Control Systems	2
1.3	Open Loop Vs Closed Loop Control Systems	3
1.4	Feedback Control Systems	4
1.5	Classification of Control Systems	4
1.5.1	Continuous Time Feedback Control Systems	5
1.5.2	Discrete Data Feedback Control Systems	5
1.5.3	Linear Control Systems	6
1.5.4	Non-Linear Control Systems	6
2	Mathematical Modelling of Physical Systems	8
2.1	Introduction	8
2.2	Mathematical Models of Physical Systems	8
2.2.1	Electrical Systems	9
2.2.2	Dual Networks	14
2.2.3	Mechanical Systems	15
2.2.4	Analogous Systems	18
2.2.5	Gears	24
2.2.6	Thermal Systems	27
2.2.7	Fluid Systems	29

2.3	Block Diagrams of Closed Loop Systems	34
2.3.1	Block Diagram Reduction Techniques	35
2.4	Signal Flow Graph Representation of Control Systems	42
2.4.1	Construction of a Signal Flow Graph for a System	43
2.4.2	Mason's Gain Formula	44
2.5	Effects of Feedback	52
2.5.1	Effect on system dynamics	53
2.5.2	Effect due to parameter variations	54
2.5.3	Effect on Bandwidth	57
2.5.4	Effect on Noise Signals	58
2.6	Modelling of Elements of Control Systems	59
2.6.1	DC Servo Motor	59
2.6.2	AC Servo Motors	63
2.6.3	Synchros	65
2.6.4	AC Tacho Generator	68
2.6.5	DC Tacho Generator	69
2.6.6	Potentiometers	69
2.6.7	Stepper Motors	71
	Problems	73

3 Time Response Analysis of Control Systems 81

3.1	Introduction	81
3.2	Standard Test Signals	81
3.2.1	Impulse Signal	81
3.2.2	Step Signal	82
3.2.3	Ramp signal	82
3.2.4	Parabolic signal	82
3.3	Representation of Systems	83
3.4	First Order System	85
3.4.1	Response to a Unit Step Input	85
3.4.2	Response to a Unit Ramp Input or Unit Velocity Input	86
3.4.3	Response to a Unit Parabolic or Acceleration Input	87
3.5	Second Order System	88
3.5.1	Response to a Unit Step Input	88
3.5.2	Response to a Unit Ramp Input	92
3.5.3	Time Domain Specifications of a Second Order System	93

3.6	Steady State Errors	99
3.6.1	Error Constants	99
3.6.2	Dependence of Steadystate Error on Type of the System	101
3.6.3	Generalized Error Coefficients - Error Series	104
3.7	Design Specifications of a Control System	113
3.7.1	Proportional Derivative Error Control (PD control)	114
3.7.2	Proportional Integral Controller (PI Control)	115
3.7.3	Proportional, Integral and Derivative Controller (PID Control)	116
3.7.4	Derivative Output Control	116
	Problems	125
4	Stability of Systems	129
4.1	Introduction	129
4.2	Stability Preliminaries	130
4.3	Necessary Conditions for Stability	133
4.4	Routh - Hurwitz Stability Criterion	134
4.5	Special Cases	137
4.6	Relative Stability	147
	Problems	149
5	Root Locus Analysis	151
5.1	Introduction	151
5.2	Basic Idea	151
5.3	Development of Root Locus Technique	153
5.4	Properties of Root Locus	155
	Problems	187
6	Frequency Response of Control Systems	190
6.1	Introduction	190
6.2	Time Domain Analysis Vs Frequency Domain Analysis	190
6.3	Frequency Response of a Control System	191
6.4	Correlation Between Time Response and Frequency Response	194

6.5	Graphical Representation of Transfer Functions	196
6.5.1	Bode plots	196
6.5.2	Polar Plots	218
6.5.3	Log Magnitude Vs Phase Plots	222
6.6	All Pass Systems	223
6.7	Minimum Phase Systems	224
	Problems	226
7	Nyquist Stability Criterion and Closed Loop Frequency Response	229
7.1	Introduction	229
7.2	Principle of Argument	230
7.3	Development of Nyquist Criterion	234
7.3.1	Nyquist Contour	234
7.3.2	Nyquist Stability Criterion	234
7.3.3	Nyquist Contour When Open Loop Poles Occur on $j\omega$ -axis	236
7.3.4	Nyquist Stability Criterion for Systems which are Open Loop Stable	252
7.4	Relative Stability	254
7.4.1	Measures of Relative Stability : Gain Margin	256
7.4.2	Phase Margin	257
7.4.3	Adjustment of Gain K for Desired Values of Gain and Phase Margins Using Polar Plots	260
7.4.4	Gain Margin and Phase Margin Using Bode Plot	261
7.5	Closed Loop Frequency Response	264
7.5.1	Constant M Circles	267
7.5.2	Constant N circles	269
7.5.3	Nichols Charts	272
	Problems	277
8	Design in Frequency Domain	281
8.1	Preliminaries of Design	281
8.2	A Design Example	282
8.3	Realisation of Compensators and their Characteristics	285

8.3.1	Lead Compensator	286
8.3.2	Lag Compensator	290
8.3.3	Lag-Lead Compensator	291
8.4	Cascade Compensation in Frequency Domain Using Bode Plots	293
8.4.1	Design of Lead Compensator	293
8.4.2	Design of Lag Compensator	304
8.4.3	Design of Lag-Lead Compensator	311
	Problems	316
9	State Space Analysis of Control Systems	318
9.1	Introduction	318
9.2	State Variables	319
9.3	State Equations for Linear Systems	321
9.4	Canonical Forms of State Models of Linear Systems	324
9.4.1	Phase Variable Form	324
9.4.2	Diagonal Form	330
9.5	Transfer Function from State Model	334
9.6	Diagonalisation	337
9.6.1	Eigenvalues and Eigenvectors	337
9.7	Solution of State Equation	345
9.7.1	Properties of State Transition Matrix	346
9.7.2	Methods of Computing State Transition Matrix	346
9.8	Qualitative Analysis of Control Systems	358
9.8.1	State Controllability	358
9.8.2	Observability	366
9.8.3	Duality Principle	372
	Problems	373
	Answers to Problems	377
	MCQ's from Competitive Examinations	387
	Answers to MCQ's	481
	MCQs from Gate Examination, Yearwise from 2003 to 2014	487
	Bibliography	533
