Foreword ..... (v)
Preface ..... (vii)
Acknowledgements ..... (ix)

Chapter 1: Basic Mathematical Techniques

1.1 Introduction 1
1.2 Sets 1
1.2.1 Types of Sets 2
1.2.2 Operations on Sets 3
1.3 Set Identities 4
1.4 Relations between Sets 5
1.5 Closure Property of Sets 5
1.6 De Morgan's Laws 6
1.7 Relations 6
1.7.1 Types of Relations 6
1.7.2 Domain and Range of a Relation 7
1.8 Operation on Relations 7
1.8.1 Closures of Relations 8
1.9 Function 8
1.9.1 Types of Functions 9
Summary 14
Review Questions 14
Objective Type Questions 15

Chapter 2: Formal Languages

2.1 Alphabets and Strings 17
2.1.1 Symbol 17
2.1.2 Alphabet 18
2.1.3 String 18

2.2 Language 20
2.2.1 Complement of Language L 21
2.2.2 Reverse of a Language L 21
2.2.3 Operations on a Language 21
2.2.4 Kleene Closure of a Language 22
2.3 Defining Languages Recursively 23
2.3.1 Formal Language Specification 24
2.4 Grammar 24
2.4.1 Productions 24
2.4.2 Language Generated by a Grammar 25
2.4.3 Types of Grammars 26
Summary 28
Review Questions 29
Objective Type Questions 29

Chapter 3: Finite Automata

3.1 Introduction 31
3.2 Finite Automaton 32
3.2.1 A Simple Automata Model 34
3.2.2 Applications of Automata Theory 35
3.3 Types of Automata 36
3.3.1 Deterministic Finite Automata (DFA) 36
3.3.2 Non-Deterministic Finite Automata (NFA) 36
3.3.3 States of the FA 36
3.3.4 Transition Functions 37
3.3.5 Acceptability of a String by DFA 39
3.3.6 Acceptability of a String by NFA 40
3.3.7 Difference between DFA and NFA 41
3.4 Equivalence of NFA and DFA 66
3.5 NFA with $\in$ – Moves 74
3.5.1 Finite Automata with $\in$ – Transitions 74
3.5.2 Equivalence of NFA with $\in$ – Transitions and NFA without $\in$ – Transitions 77
3.5.3 Procedure to Convert NFA with $\in$ Moves to NFA without $\in$ Moves 79

3.6 Minimization of DFA 89
3.6.1 Equivalent Class 90
3.6.2 Algorithm for Minimization of DFA 90
3.7 Finite State Machines (FSMs) 91
3.7.1 Moore Machine 93
3.7.2 Mealy Machine 96
3.8 Equivalence of Moore and Mealy Machines 98
3.8.1 Conversion of Moore Machine to Mealy Machine 99
3.8.2 Conversation of Mealy Machine to Moore Machine 102
3.9 Equivalence of FSMs 106
3.9.1 FSM Minimization 107
Summary 133
Review Questions 134
Objective Type Questions 143

Chapter 4: Regular Languages and Finite Automata

4.1 Regular Sets 149
4.2 Regular Expressions 150
4.2.1 Standard Regular Expressions 150
4.2.2 Properties of Regular Expressions 150
4.2.3 Applications of Regular Expressions 150
4.3 Identities for Regular Expressions 155
4.4 Arden's Theorem 155
4.5 Equivalence of Two Regular Expressions 158
4.6 Relationship between FA and RE 159
4.7 Constructing FA for a given REs 159
4.8 Conversion of FA to RE 171
4.8.1 Arden's Method for Converting DFA to RE 176
4.9 Regular and Non-Regular Languages 181
4.10 Pumping Lemma for Regular Sets 182
4.11 Properties of Regular Sets 189
4.12 Regular Grammar 194
4.13 FA from Regular Grammar 195

4.14 Regular Grammar from FA 197
Summary 205
Review Questions 205
Objective Type Questions 210

Chapter 5: Context Free Grammars and Languages

5.1 Context Free Grammars 230
5.2 Leftmost and Rightmost Derivations 239
5.3 Derivation Trees 240
5.4 Ambiguity in CFGs 244
5.4.1 Removal of Ambiguity 247
5.5 Minimization of CFGs 250
5.5.1 Removal of Useless Symbols 251
5.5.2 Eliminating $\in$ Productions 255
5.5.3 Eliminating Unit Productions 259
5.6 Normal Forms 264
5.6.1 Chomsky Normal Form (CNF) 264
5.6.2 Greibach Normal Form (GNF) 271
5.7 Pumping Lemma for CFLs 276
5.7.1 Ogden's Lemma and its Applications 283
5.8 Closure Properties of CFLs 284
Summary 293
Review Questions 293
Objective Type Questions 295

Chapter 6: Push Down Automata

6.1 Model of Pushdown Automata (PDA) 297
6.1.1 Mathematical Description of PDA 297
6.1.2 Moves of PDA 298
6.1.3 Instantaneous Description (ID) of PDA 300
6.1.4 Acceptance by PDA 300
6.2 Construction of PDA 302
6.3 Deterministic and Nondeterministic Pushdown Automata 325
6.3.1 Nondeterministic PDA (NPDA) 325
6.3.2 Deterministic PDA (DPDA) 326

6.4 Acceptance of Language by PDA 330
6.4.1 Equivalence of Empty Store and Final State Acceptance 330
6.4.2 Equivalence of Final State and Empty Store Acceptance 334
6.5 Pushdown Automata and CFL 338
6.5.1 PDA from CFG 338
6.5.2 Construction of CFG from given PDA 342
Summary 350
Review Questions 351
Objective Type Questions 351

Chapter 7: Turing Machines

7.1 Introduction 354
7.2 Turing Machine Model 354
7.2.1 Transition Table 355
7.2.2 Instantaneous Description (ID) 356
7.2.3 The Move of Turing Machine M can be defined as follows 358
7.2.4 Acceptance of a Language by TM 358
7.2.5 Differences between TM and PDA Push Down Automata 358
7.3 Construction of Turing Machine (TM) 359
7.4 Computable Functions 379
7.5 Recursively Enumerable Languages 383
7.6 Church's Hypothesis 384
7.7 Counter Machine 385
7.8 Types of Turing Machines 386
7.9 Comparison of FM, PDA and TM 389
Summary 393
Review Questions 394
Objective Type Questions 395

Chapter 8: Computability Theory

8.1 Chomsky Hierarchy of Languages 397
8.1.1 Hierarchy of Grammars 399
8.1.2 Relation among Grammar and Languages 400
8.1.3 Languages and their Related Automaton 400
8.2 Linear Bounded Automata 400
8.3 Context Sensitive Languages (CSLs) 403

8.4 LR(k) Grammars 404
8.4.1 LR(0) Grammar 406
8.5 Decidability of Problems 411
8.5.1 Decidable and Undecidable Problems 412
8.5.2 Decidable Problems for FA, Regular Grammars and Regular Languages 412
8.5.3 Decidable and Undecidable Problems about CFLs, and CFGs Decidable Problems 413
8.5.4 Decidability and Undecidability about TM 413
8.6 Universal Turing Machine 419
8.7 Post's Correspondence Problem (PCP) 421
8.8 Turing Reducibility 422
8.9 Definition of P and NP Problems 423
8.9.1 P – Problem 424
8.9.2 NP – Problem 424
8.10 NP-Complete and NP-Hard Problems 425
Summary 428
Review Questions 428
Objective Type Questions 429

Answers to Objective Type Questions 431
Gate Solved Questions 2007 to 2014 437
