<i>Preface</i>(vii)
<i>Acknowledgement</i>(ix)
Chapter 1	
Introduction	
1.1 Significance of Microorganisms2
1.1.1 Endosymbiosis3
1.2 Structure of Eukaryotic and Prokaryotic Cells4
1.3 Evolution of Microorganisms on Earth4
1.4 Microscopy5
1.4.1 Light or Optical Microscopes6
1.4.2 Electron Microscope12
1.5 Contribution of Scientists18
1.5.1 Antony Van Leeuwenhoek18
1.5.2 Alexander Fleming20
1.5.3 Louis Pasteur21
1.5.4 Robert Koch24
1.5.5 Joseph Lister25
1.5.6 Spontaneous Generation Theory26
1.6 Branches in Microbiology31
1.6.1 Branches of Pure Microbiology32
1.6.2 Branches of Applied Microbiology32
<i>Essay Questions</i>34
<i>Multiple Choice Questions</i>34
<i>Answers</i>34

Chapter 2

Diversity of Microorganisms

2.1	Introduction to Microbial Classification and Taxonomy35
2.1.1	Features of Phylogenetic Tree36
2.1.2	Assessing Microbial Phylogeny36
2.2	Archaea Resembles Eucarya in many Ways37
2.2.1	Relation and Difference between Three Domains38
2.2.2	Techniques for Determining Microbial Taxonomy and Phylogeny39
2.2.3	Classical Approaches40
2.2.4	Molecular Characteristics41
2.3	Kingdoms42
2.3.1	Taxonomy and Classification of Microbes42
2.3.2	Alternatives43
2.3.3	Higher Level-Classification of Eucarya44
2.3.4	Bergy's Manual of Systematic Bacteriology (BMSB)45
2.4	Types of Microorganisms47
2.5	Bacteria48
2.5.1	Reproduction in Bacteria66
2.5.2	Some Special Groups of Bacteria69
2.6	Fungi81
2.6.1	Characteristics of Fungi81
2.6.2	Cell Biology of the Fungi Hyphal Tip Structure83
2.6.3	Structure and Physiology of Fungi84
2.6.4	Fungal Metabolism85
2.6.5	Reproduction in Fungi88
2.6.6	Economic Importance of Fungi92
2.7	Algae95
2.7.1	Major Classification of Algae97
2.7.2	Identification of Algae104
2.7.3	Economic Importance of Algae106
2.8	Protozoa108
2.8.1	Morphology of Protozoa110
2.8.2	Intracellular Structures110

2.8.3	Classification of Protozoa112
2.8.4	Protozoan Diseases113
2.9	Viruses114
2.9.1	Morphology of Viruses118
2.9.2	Classification123
2.9.3	Viruses Replication133
2.9.4	Bacteriophages136
2.10	Identification of Microorganisms143
2.10.1	Simple Staining144
2.10.2	Differential Staining145
2.10.3	Acid Fast Staining149
2.10.4	Kinyoun's Stain151
2.10.5	Feulgen Staining Protocol152
2.10.6	Staining of <i>Corynebacterium Diptheriae</i>152
2.10.7	Miscellaneous Staining Methods153
2.11	Bio Chemical Tests for Identifying unknown Microorganisms153
	<i>Essay Questions</i>176
	<i>Multiple Choice Questions</i>176
	<i>Answers</i>176

Chapter 3

Nutrition and Growth

3.1	Nutritional Requirements177
3.2	Nutritional Types of Bacteria179
3.3	Types of Nutrient Media180
3.4	Bacteriological Media182
3.4.1	Fungal Media183
3.4.2	Classification of Media Basing on the Consistency183
3.4.3	Preparation of Media184
3.4.4	Physical Conditions required for Growth185
3.5	Pure Culture191
3.5.1	Methods of Isolating Pure Cultures191
3.5.2	Maintenance and Preservation of Pure Cultures194
3.5.3	Methods of Maintenance and Preservation195

3.6	Physiology of Growth198
3.6.1	Growth198
3.7	Reproduction202
3.8	Continuous Culture203
3.9	Bacteria Counts206
3.9.1	Methods for Bacteria Count207
	Essay Questions209
	Multiple Choice Questions210
	Answers210

Chapter 4

Disinfectants and Antiseptics

4.1	Introduction211
4.2	Some Important Definitions212
4.2.1	Desirable Properties of Disinfectant213
4.2.2	Factors Affecting Disinfectants213
4.2.3	Major Groups of Disinfectants and Antiseptics215
4.3	Phenol and Phenolic Compounds215
4.3.1	Alcohols217
4.3.2	Halogens218
4.3.3	Heavy Metals and its Compounds220
4.3.4	Dyes222
4.3.5	Synthetic Detergents223
4.3.6	Quaternary Ammonium Compounds223
4.3.7	Aldehydes224
4.3.8	Gaseous Agents225
4.3.9	Hydrogen Peroxide and Peracetic Acid227
4.4	Evaluation of Disinfectants228
4.4.1	Rideal-Walker (RW) Test228
4.4.2	Use-Dilution Test230
4.4.3	Chick-Martin Test231
4.4.4	Kelsey-Sykes Test232
4.5	Dynamics of Disinfection232
4.6	Sterilization234
4.6.1	Methods and Equipment Used for Sterilization Purposes235

4.7	Sterilization Indicators248
4.7.1	Validation of Sterilization Process248
4.8	Biological Indicators249
4.9	Control of Microorganism: Sterility Testing251
4.9.1	Definitions251
4.9.2	Sterility Test Facilities252
4.9.3	Tests for Sterility253
4.10	Chemotherapy and Chemotherapeutic Agents263
4.10.1	Chemotherapy263
4.10.2	Chemotherapeutic Agents263
4.11	Action of Antimicrobial Drugs264
4.12	Drug Resistance266
4.13	Biosafety Measures/Procedures267
	Essay Questions270
	Multiple Choice Questions270
	Answers270

Chapter 5

Immunology

5.1	Introduction271
5.1.1	Acquired Immunity272
5.1.2	Passive Immunity273
5.2	Immune Tolerance274
5.2.1	Immune Response274
5.3	Factors Influencing Infection275
5.4	General Resistance of the Host against Infection or Host Defense276
5.5	Requirements for Immunogenicity278
5.6	Non-Specific Immunity279
5.6.1	Cells Tissues and Organs279
5.6.2	Phagocytosis (Macrophage Activation)280
5.6.3	Inflammation281
5.7	Physical and Mechanical Barriers281
5.8	Chemical Mediators282

5.9	Specific Immunity284
5.9.1	Antigens284
5.9.2	Structure of Antigen285
5.9.3	Classification of Ags285
5.9.4	Important Antigens in Medicine286
5.10	Haptens286
5.11	Immunogenicity286
5.11.1	Recognition of Foreignness286
5.11.2	Class I MHC287
5.11.3	Class II MHC287
5.11.4	T-cells (T-lymphocytes)287
5.11.5	Cellular Immune Response288
5.11.6	Mechanism of Cell Mediated Immunity288
5.11.7	Cytotoxic T-cells289
5.11.8	Killer Cells289
5.12	Antibodies (Abs)290
5.12.1	Antibody Mediated Immunity291
5.12.2	Chemical Nature of Antibodies291
5.12.3	Structure of Antibody291
5.12.4	Production of Antibodies294
5.12.5	Primary and Secondary Responses295
5.12.6	Immunoglobulin Classes295
5.13	Antigens-Antibody Reactions299
5.13.1	Precipitation Reactions300
5.13.2	Electroimmunodiffusion303
5.13.3	Agglutination Reaction304
5.13.4	Complement Fixation Test (Cft)305
5.13.5	Opsonisation309
5.13.6	Radioimmuno Assay309
5.13.7	Neutralization Reaction310
5.13.8	G.Enzyme Immuno Assays (EIA)311
5.13.9	Enzyme Linked Immunosorbent Assays (ELISA)311
5.14	Classification of Vaccines314
5.14.1	The following is the fate of most Vaccines Injected Directly into Muscle Tissue314
5.14.2	There are Two Basic Types of Vaccines based on the Properties of Antigens315

5.15	Vaccine Preparations318
	5.15.1 Polio Vaccine318
	5.15.2 BCG Vaccine319
5.16	Bacterial Toxins320
	5.16.1 Exotoxins320
	5.16.2 Endotoxins322
	5.16.3 Toxoids323
5.17	General Methods of Immunization327
5.18	Chronology of Discoveries that Contributed to Immunological Techniques328
5.19	Immunological Diagnostic Tests329
	5.19.1 Mantoux Test329
	5.19.2 Schick Test329
	5.19.3 Dick Test329
	5.19.4 Schultz-Charlton Test330
	5.19.5 Widal Test330
5.20	Hypersensitivity330
	5.20.1 Type I Hypersensitivity330
	5.20.2 Type II Hypersensitivity331
	5.20.3 Type III Hypersensitivity332
	5.20.4 Type IV Hypersensitivity333
5.21	Allergenic Extracts334
	<i>Essay Questions</i>335
	<i>Multiple Choice Questions</i>335
	<i>Answers</i>335

Chapter 6

Bacterial Genetics

6.1	Introduction336
6.2	Criteria for Determining the Mode of Recombination in Bacteria337
	6.2.1 Transformation (Gene Exchange between Bacteria)337
	6.2.2 Bacterial Conjugation341
	6.2.3 Transduction343
6.3	Bacterial Genetics346
	6.3.1 Mutagenesis346
	6.3.2 Physical Mutagens347

6.3.3	Features of Spontaneous Mutations348
6.3.4	DNA Repair Mechanisms348
6.3.5	Types of Mutations349
6.3.6	Occurrence of Mutations351
6.3.7	Chemical Mutagens352
6.3.8	Detection and Isolation of Mutants352
6.4	DNA Replication356
6.5	Transcription (RNA Synthesis)358
6.6	Translation360
6.6.1	The Synthesis of a Protein Chain on a Ribosome is carried out as follows361
6.7	Gene Regulation361
6.7.1	The Lac Operon361
6.7.2	Tryptophan Operon364
6.8	Phase Variation367
	Essay Questions368
	Multiple Choice Questions368
	Answers368

Chapter 7

Epidemiology of Diseases

7.1	General Principles of Infection369
7.1.1	Transmission of Diseases371
7.1.2	Contact Transmission of Disease371
7.1.3	Vehicle Transmission of Disease372
7.1.4	Vectors Transmission of Disease372
7.2	Carrier, Vectors, Reservoirs373
7.3	Microbial Attack375
7.3.1	Entry of Microorganisms375
7.4	Events in Infection following Penetration378
7.5	Different Diseases379
7.5.1	Amoebiasis379
7.5.2	Influenza (Viral Disease)382
7.5.3	Diphtheria (Bacterial Disease)385
7.5.4	Infective Hepatitis386
7.5.5	Hepatitis B Virus (HBV)387
7.5.6	Tuberculosis389

7.5.7	Gonorrhoea391
7.5.8	Bacillary Dysentery393
7.5.9	Tetanus395
7.5.10	Polio (Poliomyelitis)397
7.5.11	Typhoid398
7.5.12	Cholera399
7.5.13	Filariasis401
7.5.14	Food Poisoning403
7.5.15	Leprosy405
7.5.16	Syphilis408
7.5.17	Malaria410
7.5.18	AIDS411
7.5.19	Whooping Cough416
7.5.20	Rabies417
7.5.21	Plague422
	<i>Essay Questions</i>423
	<i>Multiple Choice Questions</i>423
	<i>Answers</i>424
Chapter 8		
Microorganisms and their Environment		
8.1	Microbial Growth in Natural Environments425
8.2	Different Factors that Affect the Microbial Growth426
8.2.1	Temperature427
8.2.2	Hydrostatic Pressure429
8.2.3	Desiccation430
8.2.4	Osmotic Pressure431
8.2.5	Oxygen432
8.2.6	Effect of Vibration434
8.2.7	Ionic Effect434
8.2.8	Radiant Energy435
8.2.9	Extreme Cold Environment437
8.2.10	Effects and Microbial Adaptations to Environmental Conditions438

8.2.11 Electricity441
8.2.12 Mechanical Impact445
Essay Questions446
Multiple Choice Questions446
Answers446

Chapter 9

Applications of Microbes Pharmacy

9.1 Introduction447
9.1.1 Pharmaceuticals produced by Microorganisms448
9.1.2 Vitamins, Amino Acids and Organic Acids449
9.1.3 Enzymes450
9.2 Pharmaceutical Significance of Bacteria451
9.2.1 Uses of Bacteria451
9.2.2 Idli Fermentation452
9.2.3 Cabbage Fermentation452
9.2.4 Swiss Cheese452
9.2.5 Cyanocobalamin (Vitamin B-12)452
9.2.6 Riboflavin (Vitamin B ₂)453
9.2.7 β - carotene453
9.2.8 Food-grade Lactic Acid Bacteria453
9.2.9 Yogurt453
9.2.10 Nystatin453
9.2.11 Bacteriocins (Nisin)454
9.3 Pharmaceutical Significance of Fungi454
9.3.1 Vitamins454
9.3.2 Organic Acids454
9.3.3 Iron Chelating Agent454
9.3.4 Deferoxamine454
9.3.5 Enzymes454
9.3.6 Antibiotics455
9.3.7 Steroid Biotransformation455
9.3.8 Vitamin Assays455
9.3.9 Models of Mammalian Drug Metabolism455

9.3.10 Genetic Manipulation of Fungi455
9.4 Pharmaceutical Significance of Protozoa456
9.5 Pharmaceutical Significance of Algae456
9.5.1 Algae as a Source of Pharmaceuticals456
9.5.2 Neuro Protective Product456
9.5.3 Human Therapeutic Proteins456
9.5.4 Drugs457
9.5.5 Algae as a Source of Nutraceuticals457
9.6 Some of the Products Derived from Algae457
<i>Essay Questions</i>458
<i>Multiple Choice Questions</i>458
<i>Answers</i>458

Chapter 10

Microbiological Assays of Antibiotics

10.1 Introduction459
10.2 Requirements of Antibiotic Assay461
10.2.1 Methods464
10.2.2 One-level Assay with Standard Curve465
10.2.3 Two-Level Factorial Assay468
10.2.4 Turbidimetric or Tube Assay Method469
10.2.5 Precision of Microbiological Assays472
10.2.6 Microbiological Assay of Streptomycin472
10.3 Microbiological Assay of Vitamin-B ₁₂473
10.4 Bioindicators485
10.4.1 Introduction485
10.4.2 Pharmacy Applications of Bioindicators485
10.5 Biosensors491
10.5.1 Calorimetric Biosensors493
10.5.2 Potentiometric Biosensors494
10.5.3 Amperometric Biosensors497
10.5.4 Optical Biosensors499

10.5.5	Piezo-Electric Biosensors500
10.5.6	Immunosensors500
10.5.7	Microbial Biosensors503
10.5.8	Summary509
10.6	Microbial Limit Tests511
10.6.1	Preliminary Testing511
10.6.2	Methods513
10.7	Some of the Media used in the Microbial Limit Tests520
	<i>Essay Questions</i>523
	<i>Multiple Choice Questions</i>523
	<i>Answers</i>524

Chapter 11

Microbial Spoilage and Preservation of Pharmaceutical Products

11.1	Microbial Spoilage Introduction525
11.2	Spoilage - Chemical and Physicochemical Deterioration of Pharmaceuticals526
11.2.1	Pharmaceutical Ingredients Susceptible to Microbial Attack526
11.2.2	Manifestations and Mechanism of Action530
11.2.3	Observable Effects of Microbial Attacks on Pharmaceutical Products532
11.2.4	Factors Affecting Microbial Spoilage of Pharmaceutical Products532
11.3	Sources and Control of Contamination537
11.4	Microbial Standards for Non-Sterile Pharmaceutical Products540
11.5	Preservation of Pharmaceutical Products544
11.6	Useful method for Fast and High thorough put Preservative Efficacy Testing545
11.7	Microbial Assessment546
	<i>Essay Questions</i>549
	<i>Multiple Choice Questions</i>549
	<i>Answers</i>549

Chapter 12

Miscellaneous Topics

12.1	Soil Microbiology550
	12.1.1 Rhizosphere and Rhizoplane Microorganisms551
	12.1.2 Organic Matter Decomposition553
12.2	Biogeochemical Cycling555
	12.2.1 The Carbon Cycle555
	12.2.2 The Nitrogen Cycle557
	12.2.3 The Phosphorus Cycle557
	12.2.4 The Sulfur Cycle558
12.3	Food Microbiology559
	12.3.1 Food Preservation Methods560
	12.3.2 Microorganisms as Food – Single – Cell Protein562
12.4	Microbiology of Air (Aeromicrobiology)563
12.5	Microbiology of Water568
12.6	Microbiology of Milk578
12.7	Industrial Microbiology582
	12.7.1 Fermenters and Fermentative Microbes583
	12.7.2 Penicillin Fermentation (fed-batch) Method587
	12.7.3 Immobilized Enzyme Technology590
	12.7.4 Hybridomas and Monoclonal Antibodies590
12.8	Industrial Microorganisms and their Products592
	12.8.1 Escherichia Coli592
	12.8.2 Industrial Applications of Penicillium Species595
	12.8.3 Industrial Applications of Streptomyces Species601
	12.8.4 Tetracyclines603

(xxiv) Contents

12.8.5 Saccharomyces Species604
12.8.6 Future Prospects606
<i>Essay Questions</i> 606
<i>Multiple Choice Questions</i> 606
<i>Answers</i> 606
Index 607
