New Book Series

Advances in Drug Delivery

Y. Madhusudan Rao and A V Jithan

Advances in drug delivery is a very specialized area of pharmaceutics where in the principles and technologies applied in the formulation and development, are emerging and progressing. Advances in Drug Delivery incorporates latest information regarding various subjects of drug delivery. Drug delivery is a broad term encompassing various means of achieving optimum drug reach to the target tissue, cell or the receptor. Several preformulation, formulation, biopharmaceutical, targeting and pharmacokinetic principles are applied in drug delivery. Research and development in drug delivery is increasing at a rapid pace throughout the world. The need for increased efficiency of new therapies and reduction in future public health expenses will definitely bolster this area of research and development. In order to meet this demand, many well known and efficiently applied drugs will be reformulated in new drug delivery systems that can be value-added for optimized therapeutic activity. Further, several new molecules are being generated by medicinal chemists and their formulation is not any more empirical but it is now very systematic. The aim of book is to enlighten pharmaceutical scientists all around the world with latest information on the topics which are involved in cutting edge growth of pharma research and industry.

Highlights

- A chapter on hot melt extrusion is included
- Included a chapter on oral disintegrating tablets - a value addition product
- Caters to all those who aim to achieve higher objectives in drug delivery

Advances in Pharmaceutical Sciences, 4 Vol. Set

H.S.Bean, A.H. Beckektt and J.E.Carless, Chelsea College of Science and Technology, London.

Considerable progress has been made during the last one or two decades in the field of pharmaceutics, and yet there is still very little literature dealing specifically with the area of knowledge. Undoubtedly this because pharmaceutics embraces a wide range of disciplines, and much information of value to the pharmacist appears in journals having no obvious connection with pharmacy. The aim of this set is to concentrate on areas of specific interest to the pharmaceutics; for example, this will consider the physical aspects of pharmaceutics, pharmaceutical microbiology and the influence of formulation on product stability and efficacy. The articles will be an appraisal of a subject rather than a mere factual abstraction of the literature. The authors are experts in their field and have been encouraged to include the results of their experience.
