

CONTENTS

<i>Preface</i>	(v)
Chapter 1: Mixing	1
Experiment 1	
To Perform Mixing of Solid in a Solid by Double Cone Blender and Evaluate the Quality of Mixing	7
Chapter 2: Dissolution	11
Experiment 2	
To Study the Various Types of Dissolution Apparatus.....	15
Experiment 3	
To Study the <i>In Vitro</i> Dissolution Profile of Conventional Paracetamol Tablet	22
Experiment 4	
To Study the Dissolution Profile of Modified Release Tablet (Enteric Coated Tablet)	26
Experiment 5	
To Compare the Dissolution Rate of Two Different Brands of Amoxicillin Capsule having Same Dose	30
Experiment 6	
To Compare the Dissolution Profile of Immediate Release and Sustained Release Tablets of Same Drug	34
Chapter 3: Tablets	39
Experiment 7	
The Study the Flow Properties of Various Drugs and Excipients used in Tablet Manufacturing	45

(viii) Contents

Experiment 8

To Study the Structure and Functioning of Various
Types of Tablet Compression Machines 51

Experiment 9

To Evaluate Different Types of Tablet 57

Experiment 10

To Prepare and Evaluate Ascorbic Acid/
Aspirin/Paracetamol Granules 73

Experiment 11

To Prepare and Evaluate Effervescent Aspirin
Tablets I.P. by Non-Aqueous Wet Granulation Method 76

Experiment 12

To Prepare and Evaluate Chewable Antacid Tablet by a
Aqueous Wet Granulation Method 80

Experiment 13

To Prepare and Evaluate Aspirin Tablets by
Dry Granulation Method 82

Experiment 14

To Prepare and Evaluate Acetaminophen Tablets by
Direct Compression Method 85

Experiment 15

Preparation and Evaluation of Ascorbic Acid Tablets I.P. by
Wet Granulation Method using two Different Binders 87

Experiment 16

To Prepare and Evaluate Mouth Dissolving Tablet of
Aspirin by Direct Compression Method 89

Chapter 4: Coating of Granules 93

Experiment 17

To Prepare and Evaluate the Control Release Granules of
Ascorbic Acid by Pan Coating Method 97

Chapter 5: Capsules..... 101

Experiment 18

To Evaluate Empty Hard Gelatin Capsules..... 107

Experiment 19

To Determine the Size and Filling Capacity
(Displacement Value) of Hard Gelatin Capsule in
Relation to the Given Diluents 111

Experiment 20

To Study the Optimization of Formula for Capsule
Dosage form using Different Drugs and Excipients for a
Given Dose (25/50/75/100 mg) and their Evaluation 115

Experiment 21

To prepare and Evaluate the antacid Capsules of
Magnesium Oxide and Sodium Bicarbonate (1:1)..... 119

Chapter 6: Microencapsulation 123

Experiment 22

To Prepare and Evaluate Sustained Release Granules of
Ascorbic Acid (By Phase-Separation Coacervation
Technique - Microencapsulation) 128

Chapter 7: Dispersed System..... 133

Experiment 23

To Prepare and Evaluate Three Antacid Suspensions and
Compare their Stability 144

Experiment 24

To Prepare Liquid Paraffin Emulsion I.P. and
Determine the Effect of Homogenization Time on
Globule Size Distribution..... 151

Experiment 25

To Determine the HLB of Liquid Paraffin Using
Modified Gum Acacia Method 154

Chapter 8: Aerosol.....159

Experiment 26

Examination, Description and Sketching of
Parts of an Aerosol Packaging System..... 170

Experiment 27

Preparation and Evaluation of an
Aerosol Dosage form of Sulfanilamide..... 178

**Chapter 9: Modified Release Drug
Delivery System.....183**

Experiment 28

To Prepare and Evaluate Control Release
Tablet of Paracetamol 191

Experiment 29

To Prepare and Evaluate Solid Dispersion of Sulphanilamide 194

Chapter 10: Packaging System199

Experiment 30

To Evaluate the given Packaging System 206

Experiment 31

To Evaluate the Plastic Vials for their
Moisture Transmission Property 209
