

Contents

1. Introduction to Analytical Chemistry	1
1.1 History of Development of Analytical Chemistry	1
1.2 What is Analytical Chemistry?	3
1.3 The Process of Analytical Chemistry	3
1.4 Methods of Detecting Analytes	4
1.5 Applications of Analytical Chemistry	5
1.6 Skills of an Analytical Chemist	8
1.7 Analytical Chemistry and Society	10
1.8 Terms to Know	11
1.9 Questions	12
2. Statistical Treatment of Analytical Data	13
2.1 Review of Fundamental Concepts	13
2.2 Significant Figures	19
2.3 Limitations of Analytical Methods	20
2.4 Elementary Statistics Relevant to Analytical Chemistry	27
2.5 Validation	36
2.6 Problems and Questions Analysis	51
3. Quantitative Method of Analysis	51
3.1 Introduction	51
3.2 Classification of Quantitative Methods	51
3.3 General Laboratory Operations in Quantitative Method of Analysis	55
3.4 Questions	65
4. Gravimetric Analysis	66
4.1 Precipitation Equilibria: The Solubility Product	66
4.2 Unit Operations in Gravimetric Analysis	69

4.3	Role of Organic Precipitants in Gravimetric Analysis	77
4.4	Problems and Questions	79
5	Introduction to Volumetric Analysis	81
5.1	Principles of Volumetric Analysis	81
5.2	Classification of Volumetric Titrations	85
5.3	Problems and Questions	85
6	Acid-Base Titrations	86
6.1	Acid-Base Theories	86
6.2	Titrants in Non-Aqueous Titrants	90
6.3	End-Point Detection	91
6.4	Different Types of Acid-Base Titrations	93
6.5	Polyprotic Acid	100
6.6	Applications of Acid/Base Titrations	102
6.7	Important Terms to Remember	104
6.8	Important Points to Remember	105
6.9	Questions and Problems	107
7	Redox Titrations	109
7.1	Redox Reaction Theory	109
7.2	Variation of Electrode Potential with Concentration: Nernst Equation	123
7.3	Theory of Redox Titration Curves	124
7.4	Oxidising Agents	128
7.5	Detection of End Point in Redox Titrations	133
7.6	Chemical Analysis by Redox Titration	136
7.7	Questions	139
8	Complexometric Titrations	141
8.1	Theory	142
8.2	Complexometric EDTA Titrations	144
8.3	Complexometric Titration Curves	145
8.4	Metallochromic Indicators	148
8.5	Kinetics of Complexometric Titration	149
8.6	Typical EDTA Titrations	150
8.7	Advantages of Complexometric Titrations	150
8.8	Important Points to be Remembered	159
8.9	Questions and Problems	161

9	Chromatography	162
9.1	Classification in Chromatography	162
9.2	Theories of Chromatography	166
9.3	Retardation Factor	167
9.4	Retention Volume	168
9.5	Column Capacity	168
9.6	Development of the Chromatogram	169
9.7	Selection of a Chromatographic System	170
9.8	Important Points	171
9.9	Questions	180
10	Paper Chromatography	181
10.1	Migration Parameters	181
10.2	Types of Paper Chromatography	183
10.3	Experimental Details for Qualitative Analysis	185
10.4	Types of Paper	185
10.5	Stationary and Mobile Phases	187
10.6	Multiple Development	189
10.7	Applications	189
10.8	Important Points to Remember	198
10.9	Questions and Problems	199
11	Thin Layer Chromatography	200
11.1	Coating	200
11.2	Experimental Techniques	201
11.3	Superiority of TLC Over Other Chromatographic Techniques	206
11.4	Applications of TLC	207
11.5	Important Points	218
11.6	Advantages for TLC	218
11.7	Question	222
12	Gas Chromatography (GC)	224
12.1	Introduction	224
12.2	Principles of Gas Chromatographic Separations	224
12.3	Gas-Liquid Chromatography	224
12.4	Instrumentation	227
12.5	Applications	235

12.6	Introduction and Development of Headspace Analysis	239
12.7	Important Points to Remember	242
12.8	Questions	250
13	High Performance Liquid Chromatography	252
13.1	Introduction	252
13.2	Theory	252
13.3	Instrumentation	253
13.4	Materials	259
13.5	Reversed-Phase HPLC	262
13.6	Applications	273
13.7	Important Points	283
13.8	Questions	284
14	Column Chromatography	285
14.1	Columns	285
14.2	Adsorption	287
14.3	Partition Chromatography	289
14.4	Detection of Column Effluent	291
14.5	Applications	291
14.6	Important Points	296
14.7	Questions	298
15	Ion Exchange Chromatography	300
15.1	Introduction	300
15.2	Exchange Materials	301
15.3	Cation Exchangers	304
15.4	Anion Exchangers	305
15.5	Regeneration	306
15.6	Ion Exchange Capacity	306
15.7	Basis for Separations	306
15.8	Changing of Ionic Form	307
15.9	Mechanical and Chemical Stability	307
15.10	Kinetics	308
15.11	Selectivity of Ion Exchangers	308
15.12	The Column Process	310
15.13	Applications	314

15.14	Important Points	327
15.15	Questions	329
16	Gel Permeation Chromatography (GPC)	330
16.1	Introduction	330
16.2	Packing Material	331
16.3	Column	333
16.4	Gel Preparation	333
16.5	Packing of the Column	333
16.6	Application of the Sample	334
16.7	Theory of Gel Permeation Chromatography	334
16.8	Column Calibration	345
16.9	Applications of Gel Permeation Chromatography	345
16.10	Determination of the molecular weight distribution and average molecular weights of soluble oligomers and polymers	346
16.11	Important Points	348
16.12	Questions	350
17	Spectroscopy	351
17.1	Introduction	351
17.2	Wave Properties of Electromagnetic Radiation	351
17.3	Relation Between Frequency, Velocity and Wave Number	353
17.4	Particle Properties of Electromagnetic Radiation	353
17.5	Relation Between Wavelength and Particle Properties of Electromagnetic Radiation	354
17.6	Electromagnetic Spectrum	354
17.7	Interaction of Electromagnetic Radiation With Matter	356
17.8	Atomic Spectroscopy	357
17.9	Molecular Spectroscopy	357
17.10	Questions	361
18	UV Visible Spectroscopy	362
18.1	Electronic Transitions	362
18.2	Theory of Quantitative Aspects of UV Visible Spectroscopy	366
18.3	Instrumentation	369
18.4	Applications of Visible and UV Absorption Spectroscopy	371
18.5	Important Points	383
18.6	Questions and Problems	389

19	Turbidimetry and Nephelometry	392
19.1	Introduction	392
19.2	Theory	393
19.3	Effect of wavelength on scattering	394
19.4	Questions and Problems	398
20	Molecular Fluorescence & Phosphorescence and Chemiluminescence Spectrometry	399
20.1	Introduction	399
20.2	Theory	400
20.3	Chemiluminescence	411
20.4	Questions and Problems	414
21	Infra-Red Spectroscopy	415
21.1	Introduction	415
21.2	Theory of IR Spectroscopy	417
21.3	Instrumentation	419
21.4	Sample Preparation	423
21.5	Interpretation of Infrared spectra	425
21.6	Applications of I.R. Spectroscopy	429
21.7	Important Points	440
21.8	Questions and Problems	441
22	Raman Spectroscopy	444
22.1	Introduction	444
22.2	Theory	444
22.3	Stoke's and Antistoke's Lines	445
22.4	Characteristics properties of Raman lines	446
22.5	Comparison Between Raman Spectra and Infrared Spectra	446
22.6	Instrumentation	448
22.7	Resonance Raman Scattering	448
22.8	Applications of Raman Spectroscopy	448
22.9	Important Points	457
22.10	Questions and Problems	462
23	Atomic Emission, Fluorescence and Absorption Spectroscopy	463
23.1	Basic Theory	463
23.2	Principles–Electronic Transitions	465
23.3	Theory of Atomic Spectra	467

23.4	Instrumentation	471
23.5	Theory of Operation	471
23.6	Instrumental Design of AAS	472
23.7	Flame Atomisers	473
23.8	Alternative atomisation sources	479
23.9	Advantages of Flame Atomisers include	485
23.10	Interferences in Atomic Absorption Methods	490
23.11	Background Corrections	494
23.12	Applications of AAS	496
23.13	Important Points	511
23.14	Questions	514
24	Flame Photometry	516
24.1	Introduction	516
24.2	Instrumentation:	518
24.3	The Flame and the Burner	519
24.4	The Photometer or Spectrometer	523
24.5	Excitation of Spectra	526
24.6	Handling of Analytical Samples	528
24.7	Internal Standards	529
24.8	Precision and Accuracy	532
24.9	Questions and Problems	534
25	Inductively Coupled Plasma-Optical Emission Spectrometry (ICP-OES)	537
25.1	Introduction	537
25.2	Principle of the Inductively Coupled Plasma	539
25.3	Simultaneous Spectrometers	542
25.4	Sequential spectrometers	543
25.5	Analytical Output and Instrument Calibration	543
25.6	Liberty of calibration lines	544
25.7	Interferences	545
25.8	Wave Length Selection	546
25.9	Sample Preparation Methodology	547
25.10	Detection Limits in ICP Analysis	549
25.11	Operating Conditions	550
25.12	Applications of ICP	552
25.13	Questions	559

26	Inductively Coupled Plasma–Mass Spectrometry (ICP-MS)	560
26.1	History of ICP-MS	560
26.2	Theory of ICP-MS	560
26.3	Interferences	614
26.4	Methodology	624
26.5	Advantages of ICP-MS	626
26.6	Disadvantages of ICP-MS	626
26.7	Applications	626
26.8	Important Points	627
26.9	Questions	632
27	Mass Spectroscopy	635
27.1	Introduction	635
27.2	Instrumentation	638
27.3	Applications of Mass spectrometry	647
27.4	Questions and Problems	650
28	Photoacoustic spectroscopy	651
28.1	Introduction	651
28.2	Photoacoustic Effect	651
28.3	Photoacoustic Signal Generation, Processing and Interpretation	652
28.4	Photoacoustic Cell Design	656
28.5	Sample Considerations	666
28.6	Applications	668
28.7	Questions	668
29	X-Ray Absorption, diffraction and Fluorescence Spectroscopy	669
29.1	Introduction	669
29.2	Theory	669
29.3	Interaction of X-ray with matter	672
29.4	Instrumentation	674
29.5	Applications	678
29.6	Questions and Problems	681
30	Nuclear Magnetic Resonance Spectroscopy	682
30.1	Introduction	682
30.2	Principle and Theory of NMR Process	683
30.3	The External Magnetic Field	684

30.4	Experimental Arrangements	685
30.5	Instrumentation	685
30.6	NMR Spectra and Molecular Structural Elucidation	687
30.7	Shielding and Deshielding - Chemical Shift	688
30.8	Chemical Shift	689
30.9	Dipolar Coupling	703
30.10	Quantitative Analysis	709
30.11	Applications	712
30.12	Important Points	713
30.13	Problems	715
31	Electron Spin Resonance Spectroscopy	719
31.1	Introduction	719
31.2	Paramagnetism	719
31.3	Questions and Problems	741
32	Thermal Analysis	743
32.1	General introduction	743
32.2	Thermogravimetry	744
32.3	Effect of heating on the TG curves of siderite	747
32.4	Questions	763
32.5	Problems	763
33	Electro Analytical Chemistry	765
33.1	Introduction	765
33.2	Classification of Electrochemical Methods	765
33.3	Theory of Electrochemistry	767
33.4	Questions and Problems	782
34	Potentiometry	784
34.1	Introduction	784
34.2	Reference Electrodes	784
34.3	The Standard Hydrogen Electrode (SHE)	786
34.4	Questions and Problems	814
35	Conductometry	815
35.1	Introduction	815
35.2	Conductivity	815
35.3	Some Definitions and Relations	816

35.4	Effect of dilution	816
35.5	Conductance Measurements	818
35.6	Conductometric Titrations	822
35.7	Applications of Conductance measurements	825
35.8	Direct Concentration Determination	826
35.9	Questions and Problems	827
36	Electrogravimetry	828
36.1	Theory of electro-gravimetric analysis	828
36.2	Current in Electrochemical Cells	830
