Preface(v)

Chapter 1 Dosage Form Design

1.1 Characteristics of Ideal Dosage Form	2
1.2 The Need for Dosage Forms.....	3
1.3 Primary Reasons for Designing a Dosage Form	4
1.4 Types of Dosage Form	5
1.5 General Considerations in Dosage Form Design	8
1.5.1 Preformulation Concept.....	8
1.5.2 Goal of Preformulation	9
1.5.3 Significance of Preformulation Study	9
1.5.4 Preformulation Types	11
1.6 Methods for Characterizing Pharmaceutical Solids	27

Chapter 2 Tablets

2.1 Introduction	29
2.2 Advantages and Disadvantages of Tablets	29
2.2.1 Advantages	29
2.2.2 Disadvantages	30
2.3 Properties of Tablets.....	30
2.4 Types of Tablets	31
2.4.1 On the Basis of Mode of Administration.....	32
2.4.2 According to Drug Release Rate	35
2.4.3 According to Method of Manufacturing.....	35
2.4.4 On the Basis of Coating.....	36
2.5 Tablet Manufacturing Methods	37
2.5.1 Granulations Methods.....	38
2.6 Formulation of Tablets	45
2.6.1 Diluents.....	46

2.6.2	Binders/Adhesives.....	50
2.6.3	Disintegrants.....	51
2.6.4	Superdisintegrants.....	53
2.6.5	Lubricants.....	53
2.6.6	Anti Adherents.....	55
2.6.7	Glidants.....	55
2.6.8	Antioxidants.....	55
2.6.9	Preservatives.....	55
2.6.10	Sweeteners.....	56
2.6.11	Colourants.....	56
2.6.12	Flavours.....	56
2.6.13	Co-processed Excipients.....	57
2.7	Tablet Compression.....	57
2.7.1	Components and Functioning of Rotary Tablet Compression Machine.....	57
2.8	Evaluation of Tablets.....	60
2.8.1	General Appearance.....	60
2.8.2	Size and Shape.....	60
2.8.3	Thickness.....	61
2.8.4	Colour.....	61
2.8.5	Odour.....	61
2.8.6	Taste.....	61
2.8.7	Weight Variation.....	61
2.8.8	Hardness or Crushing Strength.....	62
2.8.9	Friability.....	63
2.8.10	Content Uniformity Test.....	63
2.8.11	Disintegration.....	64
2.8.12	Dissolution.....	64
2.9	Tablet Processing Problems, Causes and their Solutions.....	66
2.10	Recent Advancement of Tablet Technology.....	68

Chapter 3 Tablet Coating

3.1 Tablet Coating	70
3.2 Reason for Coating	70
3.3 Types of Tablet Coating Process	71
3.3.1 Sugar Coating	71
3.3.2 Film Coating	73
3.4 Coating Process	80
3.4.1 Pan-Pour Method	81
3.4.2 Pan-Spray Method	81
3.4.3 Fluidized Bed Process	81
3.5 Components of Tablet Coating System	81
3.5.1 Tablet Properties	82
3.5.2 Coating Process	82
3.5.3 Coating Composition	92
3.6 Process Design Control	92
3.7 Film Coating Defects	
3.7.1 Picking and Sticking	92
3.7.2 Blistering	92
3.7.3 Chipping	93
3.7.4 Cratering	93
3.7.5 Twinning	93
3.7.6 Hazing and Dull Film	93
3.7.7 Colour Variation	94
3.7.8 Bridging and Filling	94
3.7.9 Orange Peel/Roughness	94
3.7.10 Cracking	95
3.8 Quality Control	95
3.9 Recent Advancements in Coating Techniques	96
3.9.1 Compressed Coating	96
3.9.2 Laminate Coating	96
3.9.3 Dip Coating	96
3.9.4 Vacuum Film Coating	97
3.9.5 Electrostatic Dry Powder Coating	97

3.9.6 Magnetically Assisted Impaction Coating (MAIC)	97
3.9.7 Supercritical Fluid Coating.....	99
3.9.8 Opadry® Coating	99

Chapter 4 Capsules

4.1 Introduction	100
4.1.1 Advantages of Capsules.....	100
4.1.2 Disadvantages of Capsules	100
4.2 Manufacturing of Hard Gelatin Capsules.....	101
4.2.1 Gelatin	101
4.2.2 Plasticizers	104
4.2.3 Colourants.....	104
4.2.4 Opacifying Agents.....	104
4.2.5 Preservatives.....	104
4.2.6 Wetting Agent	104
4.3 Method of Production of Hard Gelatin Capsule Shells.....	104
4.3.1 Types of Materials for Filling into Hard Gelatin Capsules	105
4.3.2 Capsule Size	105
4.3.3 Determinations of Capsule Fill Weight	105
4.3.4 Filling of Hard Gelatin Capsules	106
4.3.5 Hand Filling Gelatin Capsule Machine	107
4.3.6 Cleaning and Polishing.....	110
4.4 Soft Gelatin Capsules	110
4.4.1 Manufacturing of Soft Gelatin Capsules ...	113
4.4.2 Formulation of Soft Gelatin Capsules	114
4.5 Quality Control of Capsules	115
4.5.1 Weight Variation	115
4.5.2 Content Uniformity.....	116
4.5.3 Disintegration	116
4.5.4 Dissolution.....	116
4.5.5 Capsule Stability.....	117

4.6	Packaging and Storage of Capsules.....	118
4.7	Recent Advancements in Capsule Formulation.....	119
Chapter 5	Microencapsulation	
5.1	Introduction	121
5.2	Reason of Microencapsulation	121
5.3	Applications of Microencapsulation.....	122
5.4	Formulation	123
5.4.1	Core Material.....	123
5.4.2	Encapsulation Material.....	123
5.5	Types of Encapsulation Materials	124
5.6	Techniques of Microencapsulation.....	124
5.6.1	Chemical Methods.....	125
5.6.2	Physico-chemical Methods.....	125
5.6.3	Physico-mechanical Methods	129
5.7	Mechanisms of Drug Release.....	132
5.8	Evaluation.....	133
5.9	Recent Advancement in Microencapsulation.....	133
Chapter 6	Liquid Dosages Forms	
6.1	Solutions.....	135
6.1.1	Formulation Consideration.....	136
6.2	Suspension.....	143
6.2.1	Types of Suspensions	144
6.2.2	Formulation of Suspension.....	145
6.2.3	Formulation of Suspensions	151
6.2.4	Stability of Suspensions.....	153
6.2.5	Quality Control Tests for Suspensions	155
6.2.7	Stability Testing.....	157
6.2.8	Packaging and Storage of Suspensions.....	157
6.3	Emulsions	157
6.3.1	Types of Emulsions	158
6.3.2	Tests used to Identify Emulsion Type	159

6.3.3	Formulation of Emulsion.....	160
6.3.4	Instabilities in Emulsions.....	165
6.3.5	Packaging, Labelling and Storage of Emulsions.....	168
6.3.6	Quality Control Tests for Emulsions	169
6.3.7	Stability Testing.....	170
6.3.8	Dry Emulsions	170
6.3.9	Microemulsions	171
6.3.10	Multiple Emulsions.....	172

Chapter 7 Semisolid Dosage Forms

7.1	Introduction	179
7.1.1	Topical Drug Delivery	179
7.1.2	Transdermal Delivery Systems.....	180
7.1.3	Percutaneous Absorption.....	180
7.2	Anatomy and Physiology of the Skin.....	180
7.3	Route of Absorption	181
7.4	Factors Affecting Skin Penetration	182
7.5	Functions of Skin.....	183
7.6	Classification of Semisolid Dosage Forms.....	183
7.7	Formulation of Semisolid Dosage Forms.....	185
7.7.1	Ingredients used in Preparation of Semisolids.....	185
7.8	Preparation of Semisolids.....	190
7.9	Semi Solid Preparation in Ophthalmic Drug Delivery	191
7.9.1	Classification of Ocular Drug Delivery Systems.....	192
7.10	Nasal Drug Delivery System	192
7.10.1	Formulation Aspect	193
7.10.2	Packing Storage and Labeling	194
7.11	Rectal Drug Delivery.....	194
7.11.1	Advantages, Applications and Uses	194
7.12	Vaginal Drug Delivery	195

7.13	Quality Control Parameters	196
7.13.1	pH	196
7.13.2	Particle Size	196
7.13.3	<i>In-vitro</i> Drug Release	196
7.13.4	Viscosity Measurement	196
7.13.5	Texture Analysis.....	197
7.13.6	Irritancy Test	197
7.14	Storage and Packaging of Semisolids.....	197
7.15	Advancement in Semisolid Dosage Form	198
7.15.1	Creams.....	198
7.15.2	Gels.....	198

Chapter 8 Parenteral Products

8.1	Introduction	200
8.1.1	Advantages of Parenterals	200
8.1.2	Disadvantages of Parenterals.....	200
8.2	Route of Parenteral Administration.....	201
8.2.1	Intravenous Route.....	201
8.2.2	Intramuscular Route	201
8.2.3	Subcutaneous Route	201
8.2.4	Intrathecal Route.....	202
8.2.5	Intraarterial Route.....	202
8.2.6	Intradermal Route	202
8.2.7	Intracisternal Route.....	202
8.2.8	Intraperitoneal Route	202
8.2.9	Intrapleural Route	203
8.2.10	Intraarticular	203
8.4	Types of Parenteral Formulation	204
8.4.1	Large Volume Parenteral (LVP) Solutions	204
8.4.2	Small Volume Parenteral (SVP) Solutions	204
8.4.3	Specialized Large Volume Parenterals.....	205

8.5	Formulation Aspects.....	206
8.5.1	Criteria for Parenterals.....	206
8.5.2	Vehicles	207
8.5.3	Antioxidants	209
8.5.4	Antimicrobial Agents	209
8.5.5	Buffers	209
8.5.6	Solubilizing Agents/Co-solvents	210
8.5.7	Tonicity Adjustment Agents.....	210
8.5.8	Protectants	210
8.6	General Manufacturing Process	211
8.7	Pyrogens	215
8.7.1	Nature and Source	215
8.7.2	Elimination of Pyrogens	216
8.8	Quality Control Tests for Parenterals	216
8.8.1	Weight Variation or Content Uniformity Test.....	216
8.8.2	Particulate Matter in Injections.....	217
8.8.3	Pyrogen Test	217
8.8.4	Sterility Test	218
8.8	Packaging and Labelling of Parenterals	219
8.9	Recent Advancement in Parenteral Formulation....	221

Chapter 9 Pharmaceutical Aerosols

9.1	Introduction	223
9.2	Components of Aerosol.....	224
9.2.1	Propellants	224
9.2.2	Containers.....	226
9.2.3	Valves	228
9.2.4	Actuators.....	229
9.2.5	Product Concentrates	230
9.3	Formulation of Aerosol	230
9.3.1	Solution System.....	231
9.3.2	Water Based Systems	232
9.3.3	Suspension or Dispersion Systems	232

9.3.4	Foam Systems.....	232
9.3.5	Intranasal Aerosols	233
9.4	Manufacture of Aerosol.....	233
9.4.1	Cold Filling Method	234
9.4.2	Pressure Filling Process.....	234
9.4.3	Compressed Gas Filling.....	235
9.5	Stability Testing of Aerosols.....	235
9.6	Quality Control Tests for Aerosols.....	236
9.6.1	Specifications for Raw Materials.....	236
9.6.2	Testing during Manufacture	237
9.6.3	Testing of Finished Product.....	237
9.7	Advancements in Aerosol System.....	240

Chapter 10 Ophthalmic Preparations

10.1	Introduction	241
10.2	Anatomy and Physiology of Eye.....	242
10.3	Mechanism of Ocular Drug Absorption	244
10.3.1	Ocular Bioavailability.....	244
10.4	Classification of Ocular Drug Delivery Systems ...	245
10.4.1	Solutions	246
10.4.2	Suspensions	246
10.4.3	Ophthalmic Ointments.....	246
10.4.4	Ocular Inserts.....	246
10.4.5	Contact Lenses.....	247
10.5	Formulation Considerations	248
10.5.1	Required Characteristics of Ophthalmic Preparations	248
10.5.2	Manufacturing Process	248
10.5.3	Ointment Bases.....	248
10.6	Pharmaceutical Requirements	249
10.6.1	Isotonicity Value.....	249
10.6.2	Buffering.....	249
10.6.3	Sterility and Preservation.....	250

10.6.4	Viscosity and Thickening Agent	250
10.6.5	Stability.....	250
10.7	Evaluation.....	251
10.7.1	Appearance/Clarity Test.....	251
10.7.2	Rheological Studies	251
10.7.3	Determination of pH.....	252
10.7.4	Sterility Test	252
10.7.5	Leak Test	252
10.7.6	Uniform Consistency	253
10.7.7	Metal Particle in Ophthalmic Preparation .	253
10.7.8	Accelerated Stability Studies.....	253
10.8	Storage and Packaging of Ophthalmic Preparations	253
10.9	Labelling of Ophthalmic Preparation	254
10.10	Advancements in Ophthalmic Dosage Forms	255

Chapter 11 Suppositories

11.1	Introduction	257
11.2	Factors affecting Drug Absorption from Suppository	258
11.2.1	Physiological Factor	258
11.2.2	Physiochemical Characteristic of the Drug.....	260
11.3	Specifications for Suppository Bases	260
11.3.1	Origin and Chemical Composition	261
11.3.2	Melting Range	261
11.3.3	Solid Fat Index (SFI)	261
11.3.4	Hydroxyl Value	261
11.3.5	Solidification Point.....	261
11.3.6	Saponification Value	261
11.3.7	Iodine Value	261
11.3.8	Water Number	262
11.3.9	Acid Value.....	262

11.4	Ideal Suppository Bases	262
11.5	Suppository Bases Classification	263
11.6	Types of Suppositories	267
11.7	Methodology for Manufacturing of Suppositories	267
11.8	Problems in Formulation	269
11.8.1	Water in Suppositories.....	269
11.8.2	Hygroscopicity	270
11.8.3	Drug-Excipient Incompatibility.....	270
11.8.4	Viscosity	270
11.8.5	Brittleness	270
11.8.6	Density.....	270
11.8.7	Volume Contraction	271
11.8.8	Rancidity.....	271
11.8.9	Weight and Volume Control.....	271
11.9	Testing of Suppositories.....	272
11.9.1	Appearance	272
11.9.2	Test of Physical Strength.....	272
11.9.3	Melting Range Test	273
11.9.4	Liquefaction Time or Softening Time Test	273
11.9.5	Breaking Test.....	273
11.9.6	Dissolution Testing.....	274
11.9.7	Test of Uniformity of Drug Content.....	274
11.9.8	Stability.....	274
11.10	Recent Advancements in Suppositories	275

Chapter 12 Packaging of Pharmaceutical Products

12.1	Introduction	276
12.1.1	Functions of Packaging	276
12.1.2	Importance of Packaging	277
12.2	Types of Packaging	277
12.2.1	Primary Package	277
12.2.2	Secondary Package.....	278
12.2.3	Tertiary Package.....	278

12.3	Components of Packaging Material	278
12.3.1	Containers	278
12.3.2	Closures	284
12.4	Labels	287
12.5	Quality Assurance Aspects of Packaging	287
12.6	Special Packaging	288
12.6.1	Blister and Strip Packaging	288
12.6.2	Tamper-Resistant	288
Packaging		290
12.6.3	Child-Resistant Packaging	291
12.7	Analysis and Control of Packaging Materials	292
12.8	Advancement in Pharmaceutical Packaging	293
Index		295
