

## CONTENTS

---

<i>Preface</i> .....	(xi)
<i>Acknowledgements</i> .....	(xiii)

### **Chapter 1 Analytical Methods – An Overview**

Introduction .....	1
Aims of Analytical Chemistry .....	2
Selection of Method of Analysis .....	2
Various Methods of Analysis .....	3
Hyphenated Techniques Adding New Life into the Analytical Instrumentation .....	4

### **Chapter 2 Basics of Chromatography**

History .....	6
Mikhail Tsvet's Contribution to Chromatography .....	7
Martin and Synge's Contribution to Partition Chromatography .....	8
Nomenclature for Chromatography .....	9
Basic Definitions .....	10
Principal Methods .....	12
Classification according to the Shape of the Chromatographic Bed .....	13
Classification according to the Physical State of the Mobile Phase .....	13
Classification according to the Mechanism of Separation .....	14
Special Techniques .....	16
Terms Related to the Chromatographic System .....	19
Apparatus in Column Chromatography .....	19
Apparatus in Planar Chromatography .....	20
Terms Related to the Chromatographic Process and the Theory of Chromatography .....	22
The Chromatographic Medium .....	22

(vi) *Contents*

---

The Column.....	23
The Chromatogram .....	26
Temperatures.....	32
Temperatures during Programme	
Temperature Analysis .....	32
The Mobile Phase.....	33
Pressures.....	33
Velocities .....	34
Retention Parameters in Column Chromatography .....	35
Specific Retention Volumes.....	37
Relative Retention Values.....	38
Retention Parameters in Planar Chromatography .....	40
Distribution Constants.....	42
Terms Expressing the Efficiency of Separation.....	43
Terms Related to Detection and	
Classification of Detectors .....	45
Classification according to the Form of Response.....	45
Classification according to the Basis of Response.....	45
Classification according to Detector Selectivity .....	45
Detector Response.....	46
Minimum Detectability .....	49
Linear and Dynamic Ranges .....	50
The Process of Chromatography .....	52
Factors Controlling Retention .....	52
The Thermodynamic Processes in Retention .....	54
Factors affecting the Magnitude of the	
Distribution Coefficient (K).....	55
Hydrophobic and Hydrophilic	
Interactions of Solvents.....	56
The Control of Chromatographically	
Available Stationary Phase (Vs) .....	57
The Effect of Stationary Phase Loading on the	
Performance of a Chromatographic System.....	57
The Theoretical Plate Model of Chromatography .....	58

Freundlich Adsorption Isotherm .....	62
Langmuir Adsorption Isotherm.....	63
Plumber's View of Chromatography .....	64
Solvent Selection for a Chromatography Method.....	65
Quantitative Analysis .....	69
<b>Chapter 3    Preparative Chromatography</b>	
Introduction.....	78
Preparative Thin Layer Chromatography (P-TLC).....	78
Basic Parameters in the Process of P-TLC.....	79
Applications .....	82
<b>Chapter 4    Thin Layer Chromatography (TLC)</b>	
Introduction.....	84
Theory .....	84
Technique of Thin-Layer Chromatography .....	89
Problems in TLC.....	94
Applications of TLC .....	95
<b>Chapter 5    High Performance Thin Layer Chromatography               (HPTLC) and Hyphenated Techniques</b>	
Introduction.....	99
HPTLC Steps and Procedures.....	99
Application of Samples .....	100
Development of HPTLC Plates.....	101
Derivatization.....	101
UV Cabinet for Visualization.....	102
Chromatogram Evaluation .....	102
Applications of HPTLC .....	104
Hyphenation in HPTLC .....	105
TLC/MALDI Coupling.....	106

**Chapter 6 HPLC and Related Hyphenated Techniques**

Introduction .....	108
HPLC Theory .....	108
Instrumentation .....	109
Types of HPLC Techniques .....	114
Normal Phase vs. Reverse Phase .....	114
Gradient Elution vs. Isocratic Elution .....	115
Application in Hyphenated Techniques .....	115
Liquid Chromatography-Infrared Analysis (LC-IR).....	116
Liquid Chromatography – Mass Spectrometry (LC-MS) .....	118
Liquid Chromatography-Nuclear Magnetic Resonance (LC-NMR) .....	119
Capillary Electrophoresis – Mass Spectrometry (CE-MS) .....	122

**Chapter 7 Gas Chromatography and Mass Spectrometry**

Introduction .....	124
Theoretical Aspects and Instrumentation .....	124
Calculation of the Efficiency of a Column.....	127
Consideration of Practical Inferences .....	128
Carrier Gas .....	129
Column Oven .....	129
Columns .....	130
The Liquid Phase.....	132
Effects of Matrix .....	133
Injection Systems .....	134
Detectors .....	138
Mass Analysers in GC.....	145
Limitations of GC Analysis .....	148
Limitations of Mass Spectrometry .....	149
Limitations GC-MS.....	149
Applications .....	150

<b>Chapter 8 Ion Exchange Chromatography</b>	
Introduction .....	151
Principle of Separation in Ion Exchange Chromatography .....	151
Matrixes .....	154
Characteristics Affecting the Process of Ion Exchange Chromatography.....	154
Ion-Suppression in Ion-Chromatography.....	157
Detection Methods used in Ion Chromatography .....	158
Applications of Ion Exchange Chromatography .....	159
<b>Chapter 9 Chiral Chromatography</b>	
Introduction.....	160
Stationary Phases .....	160
Applications of Chiral Chromatography.....	163
<b>Chapter 10 Analysis of Data obtained from Hyphenated Chromatographic Techniques</b>	
Introduction.....	164
Estimating the Number of Chemical Components.....	164
Chemometric Methods for Estimation of Elution Sequence.....	166
Peak Purity Assessment .....	168
<b><i>Bibliography</i> .....</b>	<b>171</b>
