Preface to the Second Edition (vii)

Preface to the First Edition (ix)

Acknowledgements (xi)

List of Acronyms and Abbreviations (xvii)

1	Fundamentals	1
1.1	Principles of Meteorological Remote Sensing	3
1.1.1	Absorption, Emission, Reflection and Scattering	3
1.1.2	Black Body and Radiation Laws	5
1.1.3	Solar and Terrestrial Radiation	6
1.1.4	Sun-Earth-Atmosphere Radiation Budget	8
1.1.5	Electromagnetic Spectrum	8
1.2	Satellite Orbits	11
1.2.1	Gravitational and Astronomical Laws	11
1.2.2	Orbital Elements	13
1.2.3	Types of Orbits	15
1.2.4	Satellite Attitude	18
1.3	Meteorological Satellite Payloads	19
1.3.1	TV Cameras	19
1.3.2	Scanning Radiometers	21
1.3.3	Along Track Scanning Radiometer	22
1.3.4	CCD Cameras	22
1.3.5	Spectroradiometers	24
1.3.6	Passive Microwave Sensors	26
1.3.7	Evolution of Meteorological Satellites and Payloads	27
1.3.8	Indian Meteorological Satellites	32
1.4	Satellite Imagery	36
1.4.1	Resolution	37
1.4.2	Characteristics of Satellite Imagery	38
1.4.3	Gray Scale, Enhancement and Pseudocolour Imagery	41
1.4.4	Navigation and Gridding	43
1.5	References	43
2	Weather Systems Observed in Satellite Imagery	46
2.1	Appearance of Surface Features	47
2.2	Inter-Tropical Convergence Zone	48

2.3	Mesoscale Systems	52
2.3.1	Thunderstorms, Hailstorms and Cloudbursts	52
2.3.2	Dust-storms or <i>Andhis</i>	58
2.3.3	Nor'westers or <i>Kal-Baisakhis</i>	59
2.3.4	Tornadoes	60
2.3.5	Mountain Waves	61
2.4	Monsoons	62
2.4.1	Onset and Advance of Southwest Monsoon	63
2.4.2	Low Level Jet	67
2.4.3	Tropical Easterly Jet	69
2.4.4	Monsoon Depressions and MTCs	70
2.4.5	Active and Weak Phases	74
2.4.6	Breaks in the Monsoon	77
2.4.7	Withdrawal of Southwest Monsoon	79
2.4.8	Northeast Monsoon	81
2.4.9	Easterly Waves	83
2.5	Tropical Cyclones	84
2.5.1	Nomenclature of Low Pressure Systems	86
2.5.2	Tropical Cyclone Basins	86
2.5.3	Structure of Tropical Cyclones	88
2.5.4	Dvorak's Technique	91
2.5.5	Movement of Tropical Cyclones	100
2.5.6	Impact of Tropical Cyclones	102
2.5.7	Cyclones in the Southern Hemisphere	105
	2.5.7.1 Tropical Cyclone Monica	106
	2.5.7.2 Cyclone Pairs	107
2.6	Winter Systems over India	109
2.6.1	Western Disturbances	109
2.6.2	Fog and Snow	112
2.7	Extra-tropical Weather	114
2.7.1	Air Masses	114
2.7.2	Cold, Warm, Stationary and Occluded Fronts	115
2.7.3	Mid-latitude Cyclones	116
2.7.4	Sub-tropical Jet Stream	118
2.8	Interaction between Tropical and Mid-latitude Systems	120
2.9	References	122
3	Estimation of Atmospheric, Oceanic and Land Parameters	129
3.1	Cloud Motion Winds	129
3.1.1	Extraction of CMWs	130
3.1.2	Use of Rapid-Scan Imagery	134
3.1.3	Applications of CMWs	135
3.2	Outgoing Longwave Radiation	136
3.2.1	ERBE and GERB Measurements	136

3.2.2	OLR Estimation	138
3.2.3	Applications of OLR	141
3.3	Large-Scale Precipitation	144
3.3.1	GOES Precipitation Index	144
3.3.2	Rainfall Estimation from Microwave Sensors	146
3.4	Vertical Profiles of Temperature and Water Vapour	147
3.4.1	NOAA TOVS	153
3.4.2	NOAA AMSU	154
3.4.3	GOES Sounders	154
3.4.4	DMSP SSM/T	155
3.4.5	INSAT-3D Sounder	156
3.5	Sea Surface Temperature	158
3.5.1	Properties of Ocean Water	158
3.5.2	The Layered Thermal Structure of the Ocean	159
3.5.3	Remote Sensing of Ocean Parameters	160
3.5.4	Satellite-derived Sea Surface Temperature	161
3.5.5	Microwave SST Retrievals	165
3.6	Potential Fishing Zones	166
3.7	Ocean Colour	167
3.8	Sea Surface Salinity and Soil Moisture	169
3.8.1	Sea Surface Salinity	169
3.8.2	Soil Moisture	170
3.9	Vegetation Index	171
3.10	Snow Cover	173
3.11	Land Surface Temperature	175
3.12	Atmospheric Ozone	176
3.13	References	178
4	Measurement of Parameters by Active Sensors	185
4.1	Precipitation	187
4.1.1	TRMM Precipitation Radar	189
4.2	Cloud Properties	192
4.2.1	POLDER	193
4.2.2	CloudSat Cloud Profiling Radar	194
4.2.3	CALIPSO Cloud-Aerosol Lidar	196
4.2.4	A-Train	198
4.3	Sea Surface Winds	199
4.3.1	ERS Scatterometers	200
4.3.2	NSCAT and QuikSCAT	201
4.3.3	Oceansat-2 Scatterometer	202
4.3.4	ASCAT and WindSat	203
4.4	Sea Surface Height	204
4.4.1	TOPEX/Poseidon	205
4.4.2	Jason and OSTM	207
4.4.3	AltiKa	208
4.5	References	208

5	Satellite Inputs for Numerical Modelling and Climate Studies	213
5.1	Use of Satellite Data for Initialization of Numerical Models	214
5.2	Direct Assimilation of Satellite Radiances	216
5.3	Tropical Cyclone Track Prediction	218
5.4	Monitoring of Aerosols for Climate Modelling	220
5.5	Monitoring of Solar Radiation	222
5.6	Generation of Satellite Data Sets for Climate Studies	223
5.7	ISCCP	224
5.8	GPCP	227
5.9	References	229
6	Evolving Scenario	234
6.1	Present Global Meteorological Satellite Configuration	234
6.2	New Techniques in Meteorological Remote Sensing	235
6.2.1	GPS-based Soundings	236
6.2.2	Hyperspectral Imaging	239
6.2.3	Lightning Detection	240
6.2.4	Polarimetric Radiometry	242
6.2.5	Doppler Wind Lidar	243
6.3	Advanced Geostationary Satellites and Sensors	244
6.3.1	GOES-R and MTG	244
6.3.2	IGeoLab	246
6.3.3	Highly Elliptical Orbits	247
6.3.4	GIFTS	248
6.4	Advanced Polar Orbiting Satellites and Sensors	249
6.4.1	MetOp	249
6.4.2	NPOESS	251
6.4.3	Suomi NPP	252
6.5	Global Precipitation Mission	254
6.6	Megha-Tropiques	257
6.7	EarthCARE	259
6.8	Small Satellites	260
6.9	GISAT	261
6.10	In Conclusion	262
6.11	References	263
	Index	267
