Contents

Chapter 1

Introduction to Matlab

1.1 What is MATLAB? 1
1.2 How to Start MATLAB 1
1.3 MATLAB Environment 1
1.4 Useful Functions and Operations in MATLAB 2
1.5 Obtaining Help on MATLAB Commands 2
1.6 Variables in MATLAB 3
1.7 Vectors and Matrices in MATLAB 3
1.8 The Dot Allows us to do Operations Element Wise 5
1.9 How to draw a plot with MATLAB 5

Chapter 2

Familiarization with MATLAB Control System Toolbox

2.1 Familiarization with MATLAB Control System Toolbox 7

Review Questions **12**

Chapter 3

Transfer Functions

3.1 Introduction 13
3.2 Procedure for Determining the Transfer Function of a Control System 13
3.3 Linear Time Invariant System 14
3.4 Block Diagram Reduction Rules 14

Review Questions **16**

Experiments **16**

3.1 Transfer Function from Zeros and Poles 16

3.2 Transfer Function to Pole Zero Conversion and Vice Versa 18
3.3 Transfer Function of Different Configurations 21
3.4 Block Diagram Reduction 24
Exercise Problems **26**

Chapter 4

Time Domain Analysis

4.1 Introduction 27
4.2 Transient and Steady State Response 27
4.3 Input Test signals 29
4.4 Impulse Signal 29
4.5 Step Signal 30
4.6 Ramp Signal 30
4.7 Acceleration Signal 31
4.8 Time Response of a First Order Control System 31
4.9 Time Response of a Second Order Control System 32
4.10 Time Response of Second Order Control System 36
4.11 Time Response of Second Order Control System 37
4.12 Step Response from a Given Transfer Function 40
4.13 Impulse Response from a given Transfer Function 42
4.14 Steady State Error Constants 44
Exercise Problems **48**

Chapter 5

Stability Analysis

5.1 Introduction 49
5.2 Definitions of Stability 49
5.3 Absolute and Relative Stability 49
5.4 Zero Input Stability 50
5.5 Asymptotic Stability 50
5.6 Marginal Stability 50

5.7 R-H Criteria 51
5.8 Root Locus 51
5.9 Nyquist Criteria 52
5.10 Bode Plot 53
5.11 Root Locus from a Transfer Function 54
5.12 Bode Plot from a Transfer Function 56
5.13 Nyquist Plot from a Transfer Function 59
Exercise Problems **62**

Chapter 6
Compensation and Controllers of Control Systems

6.1 Introduction 63
6.2 Necessary of Compensation 63
6.3 Types of Compensation Techniques 63
6.4 Phase Lead Compensation 65
6.5 Phase Lag Compensation 66
6.6 Phase Lag-Lead Compensation 67
6.7 Introduction 68
6.8 Types of Controllers 68
6.9 Characteristic Analysis of PID Controller 70
6.10 Lag Compensator 71
6.11 Lead Compensator 76
6.12 Lag- Lead Compensator 81
6.13 PID Controller Design 86
Exercise Problems **89**

Chapter 7
State Space Analysis in Control Systems

7.1 Introduction 90
7.2 State 90

7.3 State Variable 91
7.4 State Vector 91
7.5 State Space 91
7.6 Stability 92
7.7 Controllability 92
7.8 Observability 93
7.9 Transfer Funtion to State Space Model and Vice Versa 93
7.10 Controllability 96
7.11 Observability 98
7.12 Step Response of a State Space Model 100
7.13 Impulse Response of a State Space Model 103
Exercise Problems **105**

Chapter 8
Simulink Model

8.1 Introduction to SIMULINK 107
8.2 Key Features 107
8.3 Building the Model 107
8.4 Selecting Blocks 109
8.5 Building and Editing the Model 108
8.6 Navigating through the Model Hierarchy 108
8.7 Managing Signals and Parameters 109
8.8 Simulink helps you Determine the following Signal and Parameter Attributes 110
8.9 Simulating the Model 110
8.10 Choosing a Solver 109
8.11 Running the Simulation 110
8.12 Analysing Simulation Results 110
8.13 Viewing Simulation Results 110

8.14 Debugging the Simulation 111

Exercise Problems **114**
