<i>Preface</i>	(v)
Chapter 1 Polysaccharide Carriers for Induction and Evaluation of Tissue Regeneration and Drug Delivery	
1.1 Introduction	1
1.2 Role of Biomaterials for Induction of Tissue Regeneration	2
1.2.1 Polysaccharide as a Cell Scaffold to Induce Tissue Regeneration.....	7
1.2.2 Polysaccharide as a Transfection Carrier to Induce Tissue Regeneration	9
1.3 Role of Biomaterials in Evaluation of Tissue Regeneration	18
1.3.1 Polysaccharide as a Nano-sized Carrier for Cell Labeling	20
1.3.2 Polysaccharide as a Nano-sized Carrier for Targeting to the Regeneration Site.....	23
<i>Conclusion</i>	27
<i>References</i>	28
Chapter 2 Starch based Polymers for Drug Delivery Applications	
2.1 Drug Delivery Systems	37
2.1.1 Conventional Free Drug Administration	37
2.1.2 Drug Delivery Systems Classification.....	38
2.1.3 Polymeric Materials in Drug Delivery	39
2.2 Starch as a Biomaterial.....	40
2.2.1 Native Starch	40

2.2.2	Modified Starch	42
2.2.3	Blends, Composites and Nanocomposites ...	42
2.3	Starch based Drug Delivery Systems	44
2.3.1	Gels and Hydrogels	44
2.3.2	Micelles	46
2.3.3	Capsules.....	47
2.3.4	Microparticles.....	48
2.3.5	Nanoparticles	49
2.3.6	Other Starch based Drug Delivery Systems ...	50
	<i>Conclusion</i>	51
	<i>References</i>	51
Chapter 3	Seaweed Polysaccharides in Advanced Drug Delivery Application to Carrageennans	
3.1	Introduction	61
3.2	Seaweed polysaccharides	62
3.2.1	Alginates.....	64
3.2.2	Carageenans.....	66
3.2.3	Agar Gum	67
3.2.4	Ulvans.....	68
3.2.5	Microbial Polysaccharides.....	70
3.2.6	Chitosan.....	70
3.3	Polymeric Drug Delivery Systems	71
3.4	Potential use of κ -carrageenan in Pharmaceutical Applications	75
3.4.1	Introduction	75
3.4.2	κ -carrageenan as a Gelling Agent.....	76
3.4.3	Carrageenans as a Blend Agent	77
3.4.4	Modified Kappa Carrageenan as an Excipients Agent.....	80
	<i>Conclusion</i>	81
	<i>References</i>	81
Chapter 4	Konjac Polysaccharide for Drug Delivery	
4.1	Introduction	90
4.2	Konjac Glucomannan (KGM): Origin and Structure	91

4.3 Physicochemical Properties.....	93
4.3.1 Solubility	93
4.3.2 Molecular Weight.....	94
4.3.3 Gelation Properties	94
4.3.4 Derivates.....	96
4.4 KGM based Drug Delivery Systems	97
4.4.1 Blend with Polymers	98
4.4.2 Covalent Crosslinking	99
4.4.3 Polyelectrolyte Complex	103
4.3 Self-Assembly of KGM Derivates	106
4.3.1 Hydrophobically Modified KGM.....	106
4.3.2 Polyethylene Glycol Modified KGM	108
4.3.3 Others	109
<i>Perspective</i>	110
<i>Reference</i>	110
Chapter 5 Chitosan and Modified Chitosans for Drug Delivery Application	
5.1 Introduction	116
5.2 Chemistry of Chitosan Relevant to its Chemical Modification and Drug Delivery	117
5.3 Chemically Modified Chitosan for Drug Delivery Systems	119
5.4 Importance of Mucoadhesive Properties of Chitosan in Drug Delivery Systems	122
5.5 Usage of Chitosan and Modified Chitosans in Drug Delivery Systems	123
<i>Conclusion</i>	125
<i>References</i>	126
Chapter 6 Alginate, Its Chemistry and Applications in Advanced Drug Delivery	
6.1 Introduction	131
6.2 Sources of Alginate	132
6.3 Commercial Production of Alginate.....	132
6.4 Chemistry of Alginate	133

6.5	Physical Properties of Alginate	134
6.6	Chemical Properties of Alginate	134
6.7	Biocompatibility	135
6.8	Gelling Methods	135
6.9	Applications of Alginate in the Advanced Drug Delivery.....	136
	<i>Conclusion</i>	140
	<i>Acknowledgement</i>	140
	<i>References</i>	141
 Chapter 7 Polysaccharides used for Microencapsulation Processes		
7.1	Introduction	147
7.2	Microencapsulation of Drugs	147
7.3	Wall Materials for Microencapsulation.....	150
7.3.1	Gum Arabic	151
7.3.2	Alginate	153
7.3.3	Carrageenan.....	155
7.3.4	Starch and Modified Starches.....	156
7.3.5	Chitosan.....	157
7.3.6	Celluloses and Celluloses Derivatives.....	159
7.3.7	Others	161
	<i>Conclusion</i>	161
	<i>References</i>	162
 Chapter 8 Polysaccharides used in Nanoparticle based Drug Delivery Formulations		
8.1	Introduction	170
8.2	Polysaccharide-based Nanoparticles Fabricated by Crosslinking.....	173
8.2.1	Covalently Crosslinked Polysaccharide Nanoparticles.....	173
8.2.2	Ionicallly Crosslinked Polysaccharide Nanoparticles	175

8.3 Self-Assembling Polysaccharide-based Nanoparticles.....	177
8.3.1 Self-assembly of Hydrophobically Modified Polysaccharides.....	177
8.3.1.1 Linear Hydrophobic Molecules..	178
8.3.1.2 Cyclic Hydrophobic Moieties	180
8.3.1.3 Polyacrylate Family Molecules..	181
8.3.2 Polysaccharide-based Polymersomes	182
8.4 Polysaccharide Nanoparticles by Polyelectrolyte Complexation	183
8.4.1 Negative Polysaccharides	183
8.4.2 Negative Peptides	184
8.4.3 Others	185
8.5 Polysaccharide-based Hollow Nanospheres.....	185
<i>References</i>	186
