Contents

Preface **(vii)**

CHAPTER 1

Simple Stresses and Strains

1.1 Introduction 1
1.2 Normal Stress and Strain 2
1.3 Shear Stress and Shear Strain 4
1.4 Poisson's Ratio 6
1.5 Stress Strain Diagrams 7
1.6 Hooke's Law 10
1.7 Volumetric Strain (Dilation) 11
1.8 Statically Indeterminate Structures 12
1.9 Thermal Stresses 13

Solved Examples **14**
Problems for Practice **70**

CHAPTER 2

Torsion

2.1 Introduction 79
2.2 Torsion of Circular Bars 80
2.3 Power Transmitted by Shaft 83
2.4 Concept of Pure Shear and Complementary Shear 84
2.5 Relation between Elastic Constants E and G 85
2.6 Statically indeterminate Torsional Members 87

Solved Examples **88**
Problems for Practice **134**

CHAPTER 3

Principal Stresses

3.1 Introduction 141
3.2 Stresses on an Inclined Plane 143
3.3 Principal Stresses 147
3.4 Maximum Shear Stress 150
3.5 Mohr's Circle 153

Solved Examples **156**
Problems for Practice **180**

CHAPTER 4

Shear Force and Bending Moment

4.1 Introduction 183
4.2 Definitions 183
4.3 Types of Beams 184
4.4 Shear Force and Bending Moment 186
4.5 Sign conventions 186
4.6 Shear Force and Bending Moment Diagrams 187
4.7 Relations between Load, Shear Force and Bending Moment 196

Solved Examples **198**
Problems for Practice **244**

CHAPTER 5

Bending Stresses in Beams

5.1 Introduction 251
5.2 Bending Stress 252
5.3 Flexure Formula 254
5.4 Composite Beams 256

Solved Examples **258**
Problems for Practice **280**

CHAPTER 6

Shearing Stresses in Beams

6.1 Introduction 283
6.2 The Shear Stress Distribution 283
6.3 Shear Stress Distribution in a Rectangular Cross Section 286
6.4 Shear Stress Distribution in a Circular Cross Section 287
6.5 Shear Stress Distribution in a Triangular Cross Section 289
6.6 Shear Stress Distribution in a Symmetrical I Cross Section 291

Solved Examples **295**
Problems for Practice **321**

CHAPTER 7

Deflection in Beams

7.1 Introduction 325
7.2 Differential Equation for Deflection of Beams 325
7.3 Moment Area Method 328
7.4 Macaulay's Method 330
7.5 Cantilever Beam subjected to different Loading Conditions 330

7.6 Simply supported Beam subjected to different Loads 354
Solved Examples 371
Problems for Practice **401**

CHAPTER 8

Statically Indeterminate Beams

8.1 Introduction 409
8.2 Analysis by the Differential Equations of Deflection Curve 411
8.3 Analysis by Moment Area Method 411
8.4 Propped cantilever beam subjected to different loading conditions 412
8.5 Fixed Beam Subjected to Different Loading Conditions 422
8.6 A Fixed Beam with Sinking/Yielding Support 437
8.7 Continuous Beam 438
Solved Examples **441**

CHAPTER 9

Pressure Vessels

9.1 Introduction 469
9.2 Thin spherical Pressure Vessel 469
9.3 Thin cylindrical Pressure Vessel 471
9.4 Thick Cylinders 473
9.5 Lame's equation for Hoop & Circumferential Stresses 474
9.6 Longitudinal stresses and Maximum Shear Stress 477
9.7 Radial Strain 478
9.8 Compound Cylinder 478
9.9 Necessary difference of Radii for Shrinkage (Shrinkage Allowance) 481
Solved Examples **482**
Problems for Practice **504**

CHAPTER 10

Columns and Struts

10.1 Introduction 507
10.2 Buckling 507
10.3 Stability 508
10.4 Slenderness Ratio 509
10.5 Euler's Crippling of Columns for Different End Conditions 509
10.5.1 Euler's Crippling Load for Pinned – Pinned End Condition 510

10.5.2 Euler's Crippling Load for Fixed – Fixed End Condition 511
10.5.3 Euler's Crippling Load for Fixed – Free End Condition 513
10.5.4 Euler's Crippling Load for Fixed – Pinned End Condition 515
10.7 Rankine's Formula 518
10.8 Columns with Eccentric Loading (Secant Formula) 519
Solved Examples **521**
Problems for Practice **539**

CHAPTER 11

Curved Beams

11.1 Introduction 541
11.2 Winkler – Bach Formula for Curved Beams 541
11.3 Position of Neutral Axis 546
11.4 Value of H^2 547
11.5 Values of H^2 for Different Cross Sections 547
11.5.1 Rectangular Cross Section 547
11.5.2 Circular Cross Section 548
11.5.3 Triangular Cross Section 550
11.5.4 Trapezium Cross Section 552
11.5.5 Un Equal leg I Section 553
Solved Examples ***555***
Problems for Practice **570**

CHAPTER 12

Centrifugal Stresses

12.1 Introduction 577
12.2 Rotating Ring 577
12.3 Rotating Disc 579
12.4 Disc of Uniform Strength 586
12.5 Rotating Cylinder 588
Solved Examples **592**
Problems for Practice **602**

CHAPTER 13

Shear Center

13.1 Introduction 605
13.2 Shear Center 605

13.3 Locating the Shear Center for Channel Section 606
13.4 Locating the Shear Center for unequal leg I Cross Section 607
13.5 Locating the Shear Center for a Thin Walled Semi Circular Cross Section 610
Solved Examples **612**
Problems for Practice **621**

CHAPTER 14

Unit Load Method

14.1 Introduction 625
14.2 Unit Load Method 625
14.3 Procedure to be followed for Unit Load method for Determining the Deflections 626
Solved Examples 627
Problems for Practice **667**

CHAPTER 15

Strain Energy Methods

15.1 Introduction 673
15.2 Strain Energy 673
15.3 Castigliano's Theorem 674
Solved Examples **676**
Problems for Practice **685**

CHAPTER 16

Solving through ANSYS

16.1 Introduction 687
16.2 Approaches in ANSYS Software 687
16.2.1 Preprocessor 688
16.2.2 Solution Processor 688
16.2.3 Postprocessor 688
16.3 Modes of Operation in ANSYS 688
16.4 Description of ANSYS Menus and Windows 689
16.5 ANSYS Help System 690
16.6 Units in ANSYS 690
16.7 ANSYS Preprocessor 691
16.7.1 Title 691
16.7.2 Elements 691

16.7.3 Real Constants 691
16.7.4 Material Properties 692
16.7.5 Modeling 692
16.7.6 Booleans 693
16.7.7 Meshing 695
16.7.8 Boundary Conditions 695
16.8 Solution 696
16.9 General Post Processor 696
Solved Problems through ANSYS **697**
