Chapter 1 Continental Drift and Plate Tectonics: Reconstructions, Gondwanaland Break-Up, Plumes and Drifting of Indian Plate

Introduction

1.1 Continental Drift
1.1.1 Drift History and Apparent Polar Wander Path (APWP) of India and Adjoining Continents
1.1.2 Reconstructions – Paleozoic-Mesozoic, Rodinia and Precambrian Reconstructions
1.1.3 Drift History of Eurasia and Gondwanaland

1.2 Plate Tectonics
1.2.1 Sea Floor Spreading Magnetic Anomalies
1.2.2 Heat Flow and Depth of Ocean Floor with Age
1.2.3 Mid Oceanic Ridges and Subduction Zones
1.2.4 Delineation of Plates on Earth’s Surface
1.2.5 Mapping of Subduction Zones: Wadati-Benioff Seismic Zone
1.2.6 Thermal Structure of Subducting Slab and Back Arc Basins: Delamination and Foundering of Lower Crust
1.2.7 Thermal and Density Structure of Continental and Oceanic Lithospheres
1.2.8 Plate Margins – Divergent (Submersibles), Convergent, Transform Faults and Triple Junctions

1.3 Mantle Plumes and Break up of Gondwanaland
1.3.1 Mantle Plumes
1.3.2 Breakup of Gondwanaland
1.3.3 Continental Margins and Oceanic Crust – Density and Velocity Structures
1.3.4 Cenozoic Reconstructions of Gondwanaland
1.3.5 Cenozoic Movement of Indian Continent

1.4 Indian Ocean
1.4.1 Western Indian Ocean and the Arabian Sea
1.4.2 Continental Shelf Offshore West Coast of India, Laccadive Ridge and Seaward Dipping Reflectors
1.4.3 North Arabian Sea: Airborne Total Intensity Map
1.4.4 Eastern Indian Ocean and Bay of Bengal
1.4.5 Bay of Bengal, Eighty Five East Ridge and Offshore Andaman Islands – Marine Magnetic and Seismic Profiles
1.4.6 Ninety East Ridge – Crustal Section and Effective Elastic Thickness
1.5 Arabian Sea and Bay of Bengal: Satellite Derived Gravity Maps ........................................... 55
   1.5.1 Bouguer Anomaly of India and Free Air Anomaly Map of Adjoining Oceans ................................................................. 56
   1.5.2 Satellite Derived Bouguer Anomaly Map of India and Adjoining Oceans ........................................................................ 59
   1.5.3 Modelling of Gravity Anomalies along 17° N – Arabian Sea, Indian Continent and Bay of Bengal ........................................ 60

1.6 Conjugate Structures of India and Antarctica: Eastern Margin of India and East Antarctica ........................................................................ 65
   1.6.1 Gravity and Magnetic Anomalies – Godavari, Mahanadi and Cauvery Basins and Continental Shelves Offshore ............... 66
   1.6.2 Gravity and Magnetic Anomalies - Lambert Rift and Amery Ice - Shelf, East Antarctica ...................................................... 73

Chapter 2 Collision of Indian and Eurasian Plates and Seismotectonics: Himalayan and Tibetan Terrains

2.1 Introduction .................................................................................................................................................................................................. 77
   2.1.1 Collision of Indian and Asian Plates ......................................................................................................................... 77
   2.1.2 Important Tectonic Elements of Himalaya, Tibet, and Adjoining Terrains ................................................................... 80
   2.1.3 Satellite Free Air Anomaly Map ................................................................................................................................. 83
   2.1.4 Satellite Geoid Anomaly Map ......................................................................................................................................... 84
   2.1.5 Bouguer Anomaly Map ..................................................................................................................................................... 85
   2.1.6 Spectral Analysis and Depth Estimates ......................................................................................................................... 86
   2.1.7 Filtered Geoid and Bouguer Anomaly Maps – Regional and Residual Maps ................................................................. 90
   2.1.8 Modelling Regional and Residual Bouguer Anomaly of Tibet along 90°E .................................................................... 93
   2.1.9 Bouguer anomaly of Himalaya and Foredeep: Filtered Regional Maps and Lithospheric Flexure ........................................ 95
   2.1.10 Seismicity of Himalaya and Tibet and Deep Focus Earthquakes ................................................................................... 97

2.2 Central and Eastern Himalaya, Burmes Arc and Tibet – Crustal and Lithospheric Structures ..................................................................................... 102
   2.2.1 Geomorphology, Geology, and Tectonics ........................................................................................................................ 102
   2.2.2 Seismic Studies: Crustal Structures – INDEPTH Profiles and Other Seismic Studies ........................................................................ 108
   2.2.3 Seismic Studies: Lithospheric Structures ......................................................................................................................... 115
   2.2.4 Magnetotelluric Studies ...................................................................................................................................................... 120
   2.2.5 Gravity and Magnetic Studies: Structures and EET – Ganga Basin-Sikkim and Yadong- Golmud, Tibet Geotransects, and Burmese Arc .......................................................................................... 122
   2.2.6 Orography-Climate Induced Uplift and Channel Flow .................................................................................................. 140

2.3 Western Fold Belt (Pakistan) and Syntaxis, and NW Himalaya – Crustal and Lithospheric Structures .................................................................................. 144
   2.3.1 Geology and Tectonics ...................................................................................................................................................... 144
   2.3.2 Seismic Studies ............................................................................................................................................................... 146
Chapter 3  Geodynamics of the Indian Continent and Seismotectonics:
Isostasy, Archean-Proterozoic Cratons, Collision Zones, Rift Basins, Plumes and Lithosphere, and it’s Flexure

3.1 Archean-Proterozoic Tectonics ................................................................. 192
  3.1.1 Triple Junction ....................................................................................... 196
3.2 Geophysical Signatures ............................................................................ 197
3.3 Bouguer Anomaly Map of India vis-à-vis Geology and Tectonics .......... 200
  3.3.1 Geology and Tectonics .......................................................................... 200
  3.3.2 Complete Bouguer Anomaly Map of India ............................................. 202
  3.3.3 Isostasy and Effective Elastic Thickness ................................................ 204
3.4 Broad Tectonic Zones of Indian Shield ...................................................... 209
  3.4.1 Cenozoic Tectonics in the Northern Part ................................................ 209
  3.4.2 Ganga Basin and Basement Model for Hydrocarbon Exploration ...... 209
  3.4.3 Archean-Proterozoic Cratons and Collision Zones of Indian Shield ... 212
3.5 Aravalli-Delhi Mobile Belt (ADMB) and Western Rajasthan .................... 213
  3.5.1 Geology and Tectonics .......................................................................... 213
  3.5.2 Geophysical Studies – Nagaur-Jhalawar Geotransect ......................... 215
  3.5.3 Integrated Crustal Structures and Evolutionary Model ......................... 219
3.6 Satpura Mobile Belt (SMB) ........................................................................ 222
  3.6.1 Central Part of the SMB: Geophysical Studies – Crustal Structures,
      Seismicity and Evolutionary model ......................................................... 222
  3.6.2 Rifting and Platform Deposits: Vindhyan and Bijawar-Mahakoshal
      Group of Rocks and their Economic Potential – A Plate Tectonics Model .... 235
  3.6.3 Extension of the SMB towards East and West ...................................... 244
  3.6.4 Shillong Plateau and Bengal Basin, India and
      Bangladesh and Shillong Earthquake .................................................... 252
3.7 Godavari Proterozoic Belt (GPB) and Gondwana Basins – Crustal Structures
      Proterozoic Triple Junction and Seismicity ............................................. 260
  3.7.1 Godavari, South Rewa-Mahanadi Basins – Geology, and
      Bouguer Anomaly ................................................................................... 260
3.7.2 Regional Gravity and Magnetotelluric Profiles across the GPB and Dharwar Craton .................................................................................................................. 263
3.7.3 Airborne and Ground Magnetic Maps of Godavari Basin ........................................ 265
3.7.4 Airborne Magnetic Profile from Hyderabad to Puri across the GPB ..................... 267
3.7.5 Proterozoic Collision Tectonics across the GPB, Proterozoic Basins and Triple Junction ........................................................................................................ 269

3.8 Peninsular Shield: Eastern and Western Dharwar Cratons and Deccan Volcanic Province ........................................................................................................ 269
3.8.1 Geology and Tectonics ........................................................................................... 269
3.8.2 Gravity and Magnetic Fields over a Typical Granite Pluton (Hyderabad) and Earthquakes .................................................................................. 272
3.8.3 Deccan Volcanic Province: Bouguer, Airborne Magnetic and Conductivity Anomalies and Seismotectonics – Koyna and Latur Earthquakes ............. 274
3.8.4 Crustal Structures – Eastern and Western Dharwar Cratons and Madagascar .......................................................... 279
3.8.5 Crustal and Lithospheric Structures under the WDC and Offshore ................. 281
3.8.6 Evolutionary Model – Neo-Archean Plate Tectonics and Triple Junction ...... 284

3.9 Southern Granulite Terrain (SGT) .........................................................................................  285
3.9.1 Geology, Tectonics and Geophysical Investigations – Kuppam-Palani Geotransect ................................................................. 285
3.9.2 Bouguer Anomaly, Integrated Crustal Structures and Seismicity .................. 288
3.9.3 Airborne Magnetic Map and Shear Zones ...................................................................... 294
3.9.4 Evolutionary Model – Neo-Archean Plate Tectonics and Triple Junction ........ 296

3.10 Eastern Ghat Mobile Belt (EGMB) and Adjoining Cuddapah, and Coastal Godavari Basins ..................................................................................................... ... 299
3.10.1 Southern Part of the EGMB and Multi-Parameter Geophysical Investigations: Crustal Structures, Seismicity, and Evolutionary Model – Proterozoic Plate and Plume Tectonics ........................................................ 299
3.10.2 Extension of the EGMB towards South including Sri Lanka- Crustal Structures ................................................................................................. 313
3.10.3 Extension of the EGMB towards North-Crustal Structures across Hinge Zone and Bengal Basin, India and Bangladesh ................................................. 314
3.10.4 Bouguer Anomaly across East Antarctica, Crustal Structures and Rifting, and Convergence ................................................................. 316
3.10.5 Heliborne Magnetic Survey in Antarctica .......................................................... 319

3.11 Lithosphere and Asthenosphere under the Indian Continent ................................................. 320
3.11.1 Spectrum of Bouguer Anomaly Map of India ............................................... 321
3.11.2 Low Pass Filtered Regional Map and Lithospheric and Crustal Bulges and Seismicity ................................................................. 323
3.11.3 Spectral Analysis of Geoid Low of the Indian Ocean ............................................ 326
3.11.4 CHAMP Satellite and Airborne Magnetic Data Over Indian Peninsular Shield and Spectral Analysis – Moho as Magnetic Discontinuity ...................... 328
### 3.12 Conclusions: Archean-Proterozoic Convergence Model of Indian Cratons, Rifted Platforms, Plumes, and Basins

3.12.1 North Indian Shield: Paleo and Mesoproterozoic Convergence and Rifting

3.12.2 South Indian Shield: Neoarchean Convergence and Triple Junction

3.12.3 Integrated Convergence Model of Indian Cratons and Rifting

3.12.4 Lithosphere and Asthenosphere under the Indian Plate and its Rapid Drift

### Chapter 4 Seismotectonics and Geodynamics: Bhuj, New Madrid and Sumatra Earthquakes and Tsunami with Co-Seismic Changes

4.1 Introduction – Grabens and Horsts

4.1.1 Characteristics of Earthquakes

4.1.2 Earthquake Focal Mechanism

4.1.3 Type of Earthquakes

4.1.4 Seismic Zonation Map of India and SAARC Countries

4.2 Bhuj Earthquake of January 26, 2001

4.2.1 Regional Plate Tectonic Settings and Seismicity in Kachchh (Kutch)

4.2.2 Tectonics of Kachchh (Kutch) Basin – Faults and Radar Topographic Mission (SRTM) Images

4.2.3 Seismological and Field Investigations of the Bhuj Earthquake

4.2.4 Seismic Reflection Imaging

4.2.5 Bouguer Anomaly Map of Kachchh (Kutch)

4.2.6 Total Intensity Magnetic Map of Epicentral Area

4.2.7 Isostasy and Isostatic Regional Gravity Anomaly

4.2.8 Residual Gravity Anomaly

4.2.9 Basement Faults, Structures and Crustal Thickness across Wagad Uplift

4.2.10 Basement Faults and Structures across Kachchh Mainland Uplift

4.2.11 Sismotectonics of Bhuj Earthquake and Geodynamics

4.3 Source Parameters of the Bhuj Earthquake from Post Seismic Elevation and Gravity Changes

4.3.1 Pre- and Post- Earthquake Measurements of Gravity and Elevation

4.3.2 Co-seismic Dislocation Model

4.3.3 Gravity Changes Due to Faulting and Subsurface Mass Redistribution

4.3.4 Co-seismic Mass Distribution and Hydrological Changes

4.3.5 Comparison of Bhuj Earthquake with New Madrid and Shillong Earthquakes

4.4 Sumatra Earthquake of December 26, 2004 and Related Tectonic Settings

4.4.1 Earthquake and Co-Seismic Deformation

4.4.2 Associated Tsunami

4.4.3 Regional Tectonic Settings

4.4.4 Seismic Imaging, Gravity Anomalies, and Seismic Activity
Chapter 5 Resource Exploration and Geodynamics: Hydrocarbons, Groundwater, and Minerals

5.1 Introduction ............................................................................................................................ 387
  5.1.1 Hydrocarbon Exploration, Suitable Prospects, Rifted Margins and Seaward Dipping Reflectors 387
  5.1.2 Classification of Indian Basins .................................................................................... 390
  5.1.3 Groundwater Exploration in Hard Rock ..................................................................... 391

5.2 Saurashtra, NW India – Hydrocarbon and Groundwater Exploration and Geodynamics ........................................................................................................................................................................... 393
  5.2.1 Regional Tectonics and Geology .............................................................................. 393
  5.2.2 Lineament Map ........................................................................................................ 396
  5.2.3 Multi-parameter Geophysical Studies ..................................................................... 397
  5.2.4 Hydrocarbon Exploration – Integrated Approach and Subtrappean Mesozoic Sediment Thickness Map .......................................................... 404
  5.2.6 Geodynamic Studies – Moho Configuration and Volcanic Plugs with Palaeomagnetic and Geochemical Studies .................................................. 411

5.3 Kachchh – Mesozoic Sediments and Basement Model ......................................................... 421
  5.3.1 Bouguer Anomaly and Basement Model ............................................................... 421
  5.3.2 Mesozoic Sediment Thickness Map and Hydrocarbon Prospect............................ 422
  5.3.3 Airborne Magnetic Map and Groundwater Potential .............................................. 422

5.4 Cambay Basin and its Extension in Western Rajasthan (Barmer and Jaisalmer Basins) – Tertiary and Mesozoic Rift Basins and Geodynamics ...................................................... 423
  5.4.1 Bouguer Anomaly and Crustal and Basement Models ........................................... 424
  5.4.2 Crustal and Upper Mantle Models across Cambay Basin ...................................... 428

5.5 Deccan Syncline (Narmada-Tapti Section) in Central India – Mesozoic Sediments and Basement Model ............................................................................................................. 430
  5.5.1 Residual Gravity Anomaly Map ............................................................................. 431
  5.5.2 Basement Model – Velda-Sandhwa Profile ............................................................ 432
  5.5.3 Basement Model – Kothar-Sakri Profile ................................................................. 432
  5.5.4 Subtrappean Mesozoic Sediment Thickness Map .................................................. 433
  5.5.5 Nagpur-Wardha Section ......................................................................................... 433

5.6 Offshore Exploration – Hydrocarbon Prospect ..................................................................... 435
  5.6.1 Offshore West Coast of India – Seismic Section and Bouguer Anomaly .......... 435
5.6.2 Offshore and Onshore East Coast of India – Seismic Section and Bouguer Anomaly ............................................................ 438
5.6.3 Offshore Andaman Islands – Seismic Section and Bouguer Anomaly ....... 440
5.7 Vindhyan Basin, Central India and Singhbhum District – Groundwater Potential and Hydrocarbon Prospect ................................................................. 441
5.7.1 Airborne Total Intensity Map of Vindhyan Basin – Magnetic Lineaments .... 442
5.7.2 Jabera Dome – Bouguer Anomaly and Hydrocarbon Prospect .................. 444
5.7.3 Ground Magnetic and Resistivity Studies ..................................................... 445
5.7.4 Resistivity Soundings and Groundwater Potential ........................................ 446
5.7.5 Singhbhum District, Jharkhand, India - Airborne Magnetic Trends and Groundwater Potential ................................................................. 447
5.8 Upper and Lower Assam Shelf – Hydrocarbon Prospect and Geodynamics .......... 448
5.8.1 Gravity Anomalies of the Upper Assam Shelf ............................................... 450
5.8.2 Basement Model and Spectral Analysis ......................................................... 451
5.8.3 Geological Section and Oil Occurrences ......................................................... 453
5.8.4 Lower Assam Shelf (Southern Part) – Hydrocarbon Prospect and Geodynamics ................................................................. 454
5.9 Groundwater budgeting using GRACE Satellite Gravity Data ............................ 456
5.10 Mineral Exploration and Geodynamics ............................................................. 457
5.10.1 Base Metal and Gold Mineralization ............................................................... 458
5.10.2 Ferrous Minerals – Iron ore, Chromite and Mangnese Deposits ..................... 468
5.10.3 Non-Metallic Minerals ................................................................................. 470
5.10.4 Volcanic Plugs and Magnetic Anomalies ...................................................... 470
5.10.5 High Resolution Heliborne Magnetic Surveys – Volcanic Plugs and Groundwater Potential ................................................................. 473
5.10.6 Uranium Mineralization – Integrated Airborne and Ground Geophysical Surveys ................................................................................. 475

Chapter 6 Some Typical Environmental and Engineering Studies: Near Surface Geophysics

6.1 Introduction........................................................................................................... 483
6.2 Environmental Studies .......................................................................................... 483
6.2.1 Quality of Aquifers ......................................................................................... 483
6.2.2 Cavity Detection – Coal Mines ....................................................................... 485
6.2.3 Mass Changes in Coal Mines – 4-D Gravimetry ............................................. 486
6.3 Impact Craters – Lonar Lake in Deccan Trap Province ........................................ 487
6.3.1 Geophysical and Geological Signatures of an Impact Crater – Lonar Lake ...... 488
6.3.2 Gravity and Magnetic Anomalies over Lonar Lake, India – An Impact Crater .. 488
6.3.3 Gravity and Magnetic Anomalies ..................................................................... 489
6.3.4 Modeling of Gravity and Magnetic Anomalies of Lonar Lake ......................... 490
6.4 Effect of Solar Eclipse on the Earth's Gravity Field – Allias Effect
   6.4.1 Experiment during a Solar Eclipse in India
   6.4.2 Temporal Variations in Gravity Field During Solar Eclipse on 24 October, 1995
6.5 Effects of Lightning on the Earth’s Magnetic Field
   6.5.1 Site at Kompalle Village, Hyderabad
   6.5.2 Site near HMT Factory, Hyderabad
   6.5.3 Grid Survey at Kompalle Village
   6.5.4 Effects of Lightning on Magnetization of Rocks
6.6 Engineering Site Investigations
   6.6.1 Geophysical Investigations for a Power Project
   6.6.2 Nuclear Power Plant, Kakrapar, Surat, Gujarat
6.7 Archeological Site Investigations
   6.7.1 Paleochannels and Settlements of Harappa period in Kalibangan, Rajasthan
   6.7.2 Mahastupa, Nelakondapally, Khammam District, A.P., India

Appendix: I Geological Time Scale
Appendix: II Some Important Events of Recent Periods (Pleistocene and Holocene)
Appendix: III Heat Flow Map of India
Appendix IV Seismic Zonation Map of SAARC Countries-Pakistan and Bangladesh
