Advances in Drug Delivery

Y. Madhusudan Rao and A V Jithan

Advances in drug delivery is a very specialized area of pharmaceutics where in the principles and technologies applied in the formulation and development of drug delivery systems are emerging and progressing. Advances in Drug Delivery incorporates latest information regarding various subjects of drug delivery. Drug delivery is a broad term encompassing various means of achieving optimum drug reach to the target tissue, cell or the receptor. Several preformulation, formulation, biopharmaceutical, targeting and pharmacokinetic principles are applied in drug delivery. Research and development in drug delivery is increasing at a rapid pace throughout the world. The need for increased efficiency of new therapies and reduction in future public health expenses will definitely bolster this area of research and development. In order to meet this demand, many well known and efficiently applied drugs will be reformulated in new drug delivery systems that can be value-added for optimized therapeutic activity. Further, several new molecules are being generated by medicinal chemists and their formulation is not any more empirical but it is now very systematic. The aim of book is to enlighten pharmaceutical scientists all around the world with latest information on the topics which are involved in cutting edge growth of pharma research and industry.

Highlights
- A chapter on hot melt extrusion is included
- Included a chapter on oral disintegrating tablets - a value addition product
- Caters to all those who aim to achieve higher objectives in drug delivery

About the Editors

Prof. Y. Madhusudan Rao, M.Pharm, Ph.D is currently working as senior professor in University College of Pharmaceutical Sciences, Kakatiya University, Warangal. He has 35 years of experience in teaching and research, 155 research publications, 15 review articles, guided 27 scholars for Ph.D, is having 6 national and 1 international patent. He taught cosmetic technology for B.Pharm and M.Pharm students for more than 13 years. He guided the research work for 3 students at M.Pharm and 1 student for Ph.D in the field of Cosmetics and Cosmeceuticals. He acted as consultant to many industries producing cosmetics and few of the products developed are commercialized and launched. A few more cosmetic products are to be launched this year. Apart from his interest in cosmetics, he has considerable experience and publications in Novel drug delivery systems, Biopharmaceutics and Pharmacokinetics. He has 50 peer reviewed publications. He is a recipient of SERC-Fast track grant from DST India.

Prices are subject to change without prior notice
Discounts have been made during the last one or two decades in the field of pharmacoeconomics, and yet there is still
very little literature dealing specifically with the area of knowledge. Undoubtedly this because pharmacoeconomics embraces a
wide range of disciplines, and much information of value to the pharmacist appears in journals having no obvious connection
with pharmacy. The aim of this set is to concentrate on areas of specific interest to the pharmacoeconomist; for example, this will consider the physical
aspects of pharmacoeconomics, pharmacoeconomic microbiology and the influence of formulation on product stability and efficacy. The articles will be an
appraisal of a subject rather than a mere factual abstraction of the literature. The authors are experts in their field and have been encouraged to include
the results of their experience.

Water Determination and its Significance in Pharmaceutical Practice Volume - 3: 1. Recent Advances in Tablet Technology 2. The Formulation of Aspirin

Modern Dispensing
Pharmacy, 2nd Ed.
